

What is **TRANSDERMAL DRUG DELIVERY SYSTEM** ?

- ✓ Transdermal drug delivery systems (TDDS) are topically administered medicaments in the form of patches, which when applied to intact skin, allows the delivery of contained drugs into the systemic circulation via permeation through skin layers at a **predetermined and controlled rate**.
- ✓ Transdermal patches typically involve a liquid, gel, solid matrix or pressure sensitive adhesive carrier into which the drug is incorporated.
- ✓ This approach of drug delivery is more pertinent in case of chronic disorders (hypertension, diabetes) which require long term dosing to maintain therapeutic drug concentrations.
