## Visual Language Theory:

Visual Language Theory Kim Marriott, Bernd Meyer, 2012-12-06 Kim Marriott Bernd Meyer Communication is one of the hallmarks of humans. When we think of human communication, most people first think of spoken and written languages. These are similar in that symbols in the language are encountered and processed sequentially, either temporally as they are spoken or as characters are read across a page. However, not all human communication is sequential in nature. Important components of human communication are visual languages such as maps or diagrams. In these languages, the basic symbols are not encountered sequentially but rather seen together at a glance. Visual languages are ubiquitous in human cultures, ranging from traditional paintings of central Australian aborigines, which are in part maps of the countryside, to an architect's design of a new building. Visual languages have been employed from earliest pre-history to the present and are used in almost every human endeavor. They cover the entire spectrum of human expression, ranging from fine art, such as an abstract expressionist's private language, to precise technical communication using rigorously defined notation, such as musical notation, mathematical notation, or street maps. Some visual languages, such as sign languages used by the deaf community, substitute spoken language entirely. Indeed, sign languages, for example, American Sign Language, are a particularly interesting instance of visual communication since they use three-dimensional spatial arrangements of signs in combination with their sequential temporal order to constitute meaning. *Early Writings on Visual Language* Neil Cohn, 2003

**Theory and Application of Diagrams** Michael Anderson, Peter Cheng, Volker Haarslev, 2003-07-31 Diagrams 2000 is dedicated to the memory of Jon Barwise. Diagrams 2000 was the first event in a new interdisciplinary conference series on the Theory and Application of Diagrams. It was held at the University of Edinburgh, Scotland, September 1-3, 2000. Driven by the pervasiveness of diagrams in human communication and by the increasing availability of graphical environments in computerized work, the study of diagrammatic notations is emerging as a research field in its own right. This development has simultaneously taken place in several scientific disciplines, including, amongst others, cognitive science, artificial intelligence, and computer science. Consequently, a number of different workshop series on this topic have been successfully organized during the last few years: Thinking with Diagrams, Theory of Visual Languages, Reasoning with Diagrammatic Representations, and Formalizing Reasoning with Visual and Diagrammatic Representations. Diagrams are simultaneously complex cognitive phenomena and sophisticated computational artifacts. So to be successful and relevant, the study of diagrams must as a whole be interdisciplinary in nature. Thus, the workshop series mentioned above decided to merge into Diagrams 2000 as the single interdisciplinary conference for this exciting new field. It is intended that Diagrams 2000 should become the premier international conference series in this area and provide a forum with sufficient breadth of scope to encompass researchers from all academic areas who are studying the nature of diagrammatic representations and their use by humans and in machines. *The Visual Language of Comics* Neil Cohn, 2013-12-05 Drawings and sequential images are an integral part of

human expression dating back at least as far as cave paintings and in contemporary society appear most prominently in comics. Despite this fundamental part of human identity, little work has explored the comprehension and cognitive underpinnings of visual narratives until now. This work presents a provocative theory that drawings and sequential images are structured the same as language. Building on contemporary theories from linguistics and cognitive psychology, it argues that comics are written in a visual language of sequential images that combines with text. Like spoken and signed languages, visual narratives use a lexicon of systematic patterns stored in memory strategies for combining these patterns into meaningful units and a hierarchic grammar governing the combination of sequential images into coherent expressions. Filled with examples and illustrations, this book details each of these levels of structure, explains how cross-cultural differences arise in diverse visual languages of the world, and describes what the newest neuroscience research reveals about the brain's comprehension of visual narratives. From this emerges the foundation for a new line of research within the linguistic and cognitive sciences, raising intriguing questions about the connections between language and the diversity of humans' expressive behaviours in the mind and brain.

*Graph Transformation* Andrea Corradini, Hartmut Ehrig, Hans-Jörg Kreowski, Grzegorz Rozenberg, 2002-09-27. ICGT 2002 was the first International Conference on Graph Transformation following a series of six international workshops on graph grammars with applications in computer science held in Bad Honnef 1978, Osnabrück 1982, Warrenton 1986, Bremen 1990, Williamsburg 1994, and Paderborn 1998. ICGT 2002 was held in Barcelona, Spain, October 7-12, 2002, under the auspices of the European Association of Theoretical Computer Science (EATCS), the European Association of Software Science and Technology (EASST), and the IFIP Working Group 1.3 Foundations of Systems Specification. The scope of the conference concerned graphical structures of various kinds, like graphs, diagrams, visual sentences, and others that are useful to describe complex structures and systems in a direct and intuitive way. These structures are often augmented by formalisms which add to the static description a further dimension allowing for the modeling of the evolution of systems via all kinds of transformations of such graphical structures. The field of Graph Transformation is concerned with the theory, applications, and implementation issues of such formalisms. The theory is strongly related to areas such as graph theory and graph algorithms, formal language and parsing theory, the theory of concurrent and distributed systems, formal specification and verification, logic, and semantics.

**The Construction of Words** Geert Booij, 2018-04-13. This volume focuses on detailed studies of various aspects of Construction Morphology and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions that is pairs of form and

meaning Morphological patterns are accounted for by construction schemas These are the recipes for coining new words and word forms and they motivate the properties of existing complex words Both schemas and individual words are stored and hence there is no strict separation of lexicon and grammar In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition word processing and language change **Empirical**

**Comics Research** Alexander Dunst, Jochen Laubrock, Janina Wildfeuer, 2018-07-03 This edited volume brings together work in the field of empirical comics research Drawing on computer and cognitive science psychology and art history linguistics and literary studies each chapter presents innovative methods and establishes the practical and theoretical motivations for the quantitative study of comics manga and graphic novels Individual chapters focus on corpus studies the potential of crowdsourcing for comics research annotation and narrative analysis cognitive processing and reception studies This volume opens up new perspectives for the study of visual narrative making it a key reference for anyone interested in the scientific study of art and literature as well as the digital humanities Diagrammatic Representation and Inference Mary
