Department of Agriculture,1916 Fermented Foods: Characterization of the Autochthonous Microbiota Teresa Semedo-Lemsaddek,Mirjana Grujović,Marta Laranjo,Maria José Saavedra,Cinthia Alves Barroco,2024-11-20 Fermented foods harbour diverse and complex microbial communities that change over time and vary depending on the type of product particularly artisanal ones that do not rely on starter cultures to conduct the fermentation process Thus autochthonous microbiota can originate from raw materials be added by workers be introduced via equipment or develop as a consequence of the production environment The contribution of this microbiota is crucial for the development of specific organoleptic features of the final product Moreover the complex dynamics and interactions between microbes and growth substrates raw materials can positively influence the quality and safety of the final product For a long time the microbiota present in artisanal fermented foods was studied using traditional microbiological methodologies whose inherent limitations did not fully yield the rich complexity of the fermentation process The advent of OMIC technologies and the concomitant study of fermented foods has provided essential insights into the metabolic and functional properties of the microbial communities and their impact on the fermented product itself including the molecules that define aroma and flavour as well as their nutritional properties Until now most OMIC studies have neglected artisanal fermented foods focusing on commercial products such as wine bread and beer As such information on the correlation between the microbiota present in artisanal products and their properties remains limited What and how Rebecca Gibbons Tatnall Bush,1920 **The Farm and Home Cook Book** Mary R.
