**Converging Operations in the Study of Visual Selective Attention** Arthur F. Kramer, Michael G. H. Coles, Gordon D. Logan, 1996-01 This volume represents the state of the art in research on visual selective attention with a focus on the broad theme of converging operations In 19 chapters prominent scholars in the study of visual attention bring readers up to date on findings made possible over the past 15 years by new research methods and brain imaging technologies The first 5 chapters present a review and tutorial on the current issues of relevance to the study of visual selective attention including specific research techniques and various theories paradigms and models The remaining chapters provide cutting edge research from multiple perspectives behavioral studies computational modeling human research and neural imaging techniques An examination of how disparate approaches from a variety of disciplines can be combined to provide an integrated view of visual selective attention is also presented

**Converging Operations in the Study of Visual Selective Attention** covers a broad scope of topics inhibition top down and bottom up control of attention locus of selection and representation in reporting the range of research available from leaders in the field In documenting these accomplishments it sets the agenda for future studies

**Visual Selective Attention** James E. Hoffman, DELAWARE UNIV NEWARK DEPT OF PSYCHOLOGY., 1990 Eye movements and attention Spatial attention can be allocated to different areas of the visual field within a single eye fixation showing that there is some degree of independence between the systems controlling attention and the eyes Previous investigators have explored the degree of independence by requiring subjects to simultaneously attend to different points in the field and move their eyes to the same or different locations For example Klein 1979 reasoned that if the two systems are independent then subjects should be able to move their eyes to one location and attend to another without any mutual interference Although he reports results consistent with this hypothesis there are methodological problems with his study that make any conclusions suspect

*Visual Selective Attention* Eleftheria Kotsopoulos, 2009 Humans are capable of selecting information that is goal relevant Irrelevant distractor information however typically is not filtered completely and impacts on responses to the goal Recent theories of selective attention indicate that distractor interference is determined by the perceptual load of a visual display and the availability of cognitive control mechanisms working memory load It is unclear however which mechanisms assist

efficient selective attention and how irrelevant distracting information is rejected Using a go no go visual attention task Experiment 1 and a visual search task Experiment 2 this series of experiments examined distractor processing in visual selective attention Visual selective attention Odmarr Neumann,1986 **Development of Visual Selective Attention** Regan Lanaye Mott,1999 **Theories of Visual Attention - linking cognition, neuropsychology, and neurophysiology** Søren Kyllingsbæk, Signe Allerup Vangkilde, Claus Bundesen, 2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen's 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies *The Effect of Blur on Visual Selective Attention* Jared Peterson, 2016 The effect of blur clarity contrast on selective attention was investigated in terms of how unique blur and or clarity guides attention Visual blur has previously been suggested to be processed preattentively using a dual task paradigm Loschky et al 2014 Experiments 1 and 2 used rotated L and T visual search tasks with blur clarity contrast being manipulated such that it was non predictive of the target's location Each experiment was preceded by a legibility control study such that blurred and clear letters had similar accuracy and reaction times This allowed for the results to be interpreted as changes in attention rather than difficulty identifying the letters because they were blurry Results suggest that when non predictive of target location unique blur plays a passive role in selective attention in which it is ignored neither capturing nor repelling attention to its spatial location whereas unique clarity captures attention The findings provide insight to the role that blur clarity contrast plays in guiding visual attention which can be implemented in visual software to help guide selective attention to critical regions of interest displayed on a computer screen **Visual selective attention** Odmarr Neumann, Alex H. C. van der Heijden, Alan Allport, 1984 Visual Selective Attention T. Bachmann, Wolfgang Prinz, T. H. Stoffer, 1993 Event Related Potential Study of Visual Selective Attention and Working Memory in Children Grace Wallsinger, 2023 One current model of visual selective attention proposes two mechanisms that work together to achieve processing of important information facilitation which controls the processing of relevant target stimuli and suppression which works to filter out irrelevant distracting stimuli While facilitation is seen in all ages previous research indicates suppression develops later in childhood Plebanek 2019 Wong Kee You et al 2019 One

theory regarding the development of selective attention is that it is linked to the development of working memory given the functional and neural overlap between the two processes Downing 2000 LaBar et al 2019 This study investigated the developmental timeline of suppression using electrophysiological methods to create a quantitative physiological measure of facilitation and suppression during visual selective attention using the P1 N1 event related potential ERP components for 24 adults and 12 children 8 12 years old Our results reveal a suppression effect of the N1 component for adults but not for children suggesting that suppression may not develop before the age of 12 Additionally we discovered children reach adult levels for visual working memory capacity between the ages of 10 12 years old and that for children only visual working memory capacity has a significant interaction with attention ability This indicates that working memory capacity develops earlier and may influence later development of selective attention skills including suppression Understanding the development of attention and working memory will provide useful information in creating effective classroom management strategies and enhancing the focus of task related information to foster childhood learning Selective Attention in Vision A.
