globe insufficient integrated clinician education and a shortage of well trained clinicians to provide individualized falls assessment and care This is particularly crucial given the neurological complexities of conditions like Parkinson s LBD and FTD Additionally patient adherence to existing exercise programs is poor with 70% dropping out early Balance physiotherapy is a key intervention for falls prevention and it is imperative to develop comprehensive individualized multifactorial balance rehabilitation programs Technology based solutions can help address these issues by increasing accessibility and adherence providing wider and easier home based access to high quality falls services and interventions
