*The changing interaction between robots and humans in the working environment* Peter Rössel,2016-03-23 Essay from the year 2015 in the subject Leadership and Human Resources

Miscellaneous grade B Sophia Antipolis Campus France SKEMA Business School language English abstract Within my research paper I analyze how the further development of robotic devices will influence our working environment Robots are going to change the global economy drastically With severe effects on the job market as recent studies outline In the United Kingdom alone one third of jobs could be omitted due to the robot revolution in the United States with 47 percent even almost half Especially in low skilled job fields robots could take many working spaces of human beings enormous social shifts would result Even though a lot of people argue that technical advancement and therefore the further development of robotic devices bring advantages to our lives for the most part we have to start to realise that robots may replace our jobs and therefore adapt to a changing work environment More and more people are outcompeted by a non living species an unlikely scenario that though will take place in the future and therefore people have to learn to deal with this new setting
