**Sailing Into the Future** Association of College and Research Libraries. National Conference, 2007 A collection of the invited and contributed papers for the ACRL 13th National Conference in Baltimore MD March 29 April 1 2007 The Virtual Campus Gerald C. Van Dusen, 1997 The virtual campus is a metaphor for the electronic teaching learning and research environment created by the convergence of several relatively new technologies including but not restricted to the Internet World Wide Web computer mediated communication video conferencing multi media groupware video on demand desktop publishing intelligent tutoring systems and virtual reality The focus of this monograph is of necessity limited to changes occurring in higher education institutions that are committed to reform via technology A survey of the literature finds reform characterized by changes in teaching learning research and scholarly activity organizational culture and governance and finance Section 2 takes up teaching on the virtual campus and how institutional variables influence adoption of information technologies according to their particular missions and goals Section 3 on classroom learning contrasts traditional and virtual classrooms and describes the interface capabilities of various technologies Section 4 explores recent reconceptualizations of scholarship as well as new computer based technologies that are beginning to influence both the methods and substance of research Section 5 depicts efforts to reform both the bureaucratic and academic spheres of higher education institutions by applying principles of Total Quality Management Section 6 delineates some of the important new responsibilities of governing boards including monitoring regulatory legislation establishing a telecommunications policy and shepherding resources for technology The final section

draws conclusions from the literature and makes recommendations for institutional planning and research. Specifically the seven conclusions are:

- 1 a paradigm shift can occur only in institutions committed to comprehensive reform
- 2 attempts to change the classroom focus from the sage on the stage to collaborative learning are likely to fail without a substantial commitment to professional development
- 3 higher education will continue to be market driven requiring redoubled efforts to define academic productivity
- 4 new constituencies appear to be well served by a variety of available distance learning venues
- 5 the TQM movement has made impressive inroads in higher education administration however very little penetration has occurred when it most matters on the academic side of the institution
- 6 even as instructional use of technology rises institutional support for applications development has been dilatory and
- 7 the historic commitment to core values in traditional undergraduate education has wavered the same vacillation threatens to undermine general education requirements in electronically delivered certificate and degree programs

Seven recommendations for beginning this process of integration include:

- 1 create a venue where key stakeholders can analyze major technology issues and purchases
- 2 assert the value of technology based learning from a variety of research perspectives
- 3 establish quality standards for certificate and degree programs
- 4 avoid pitting traditionalists against technology enthusiasts
- 5 make collaboration and cooperation not reengineering and restructuring the new institutional buzz words
- 6 retain a strong commitment to adequate library staffing and funding and
- 7 prepare for success by creating the necessary support structures

Ten years after Virtual Environment research started with NASA's VIEW project these techniques are now exploited in industry to speed up product development cycles to ensure higher product quality and to encourage early training on and for new products. Especially the automotive industry but also the oil and gas industry are driving the use of these techniques in their works. The papers in this volume reflect all the different tracks of the workshop: reviewed technical papers, as research contributions, summaries on panels of VE applications in the automotive, the medical, the telecommunication and the geoscience field, a panel discussing VEs as the future workspace, invited papers from experts reporting from VEs for entertainment industry, for media arts, for supercomputing and productivity enhancement. Short industrial case studies reporting very briefly from ongoing industrial
