Domain-Specific Application Frameworks Mohamed E. Fayad,Ralph E. Johnson,2000 Object Technology An invaluable collection of domain specific frameworks Domain Specific Application Frameworks Frameworks provide generic software architectures that can be reused indefinitely to generate new applications But they

don't readily translate from one business or industry domain to another. A telecommunications framework looks very different from a currency trading framework. For instance, developers need instruction on how to build frameworks specific to the domains for which they program. Now this book/CD-ROM package gives developers models and much more. Each chapter is built around a case study reporting a major framework implementation or customization project. The 30 examples contained in the book cover an array of application domains including Flexible manufacturing architectures, Computer integrated manufacturing, New generation control systems, Concurrent engineering, Reliable distributed computing, High performance Web servers, Multimedia telecommunications, Networking and telecommunications, Industrial visualization, and many others. The enclosed CD-ROM gives you Example frameworks, Documentation and manuals, Framework code and implementation tips, Sample framework architectures and models, Design patterns and presentations, Animated demonstrations.

Development of a new competence and behaviour model for skills in working with people for project managers Eddie Fisher, 2008-06-10. Doctoral Thesis/Dissertation from the year 2006 in the subject Business economics, Business Management, Corporate Governance. The Open University, Open University, Milton Keynes, United Kingdom. Language: English. Abstract: The growing penetration of projects as a way of organising work in many organisations has created a shortcoming between what companies expect in terms of project delivery and the way in which their project managers execute projects. The constantly changing demands have created a need for project managers to manage the people in their projects more effectively to meet these expectations. A review of the general and project management literature has revealed that a shortcoming exists and the nature of this shortcoming. What used to be appropriate skills in working with people are no longer adequate now that working practices are changing in response to increases in pressures to achieve better results. This thesis has developed a competence and behaviour model for skills in working with people for project managers that provides the means to fill the shortcoming. The exploration to develop this model has taken place mainly through interviews with project managers from the community of practice in United Kingdom organisations, supplemented by the participatory research observations of the researcher as a practising project management professional. The research focus was on the impact humans make in the activities of project management within a socially constructed world. The research considered competences and behaviours of skills in working with people for project managers and therefore had to deal with the meaning that people put on their observations. As a consequence, their descriptions have been collected, analysed and interpreted by applying a constructivist/interpretivist approach within a phenomenological research paradigm. The results from this study are of interest to both academics and the community of practice in project management. The new competence and behaviour model of skills in working with people for project managers can be incorporated in future editions of bodies of knowledge such as those

promoted by the PMI APM or IPMA and other people competence models in the area of general management

voiceover we now begin a whole new area of circuit analysis called sinusoidal steady state analysis you can also call it ac analysis ac stands for alternating current it means it is a voltage or a current that where the signal actually changes sign it is positive sometimes it is negative sometimes

impedance video ac circuit analysis khan academy - Nov 21 2022

about transcript the ratio of a sinusoidal voltage to a sinusoidal current is called impedance this is a generalization of ohm s law for resistors we derive the impedance of a resistor inductor and capacitor the inductor and capacitor impedance includes a term for frequency so the impedance of these components depends on frequency

circuit analysis electrical engineering science khan academy - Jun 28 2023

circuit analysis is the process of finding all the currents and voltages in a network of connected components we look at the basic elements used to build circuits and find out what happens when elements are connected together into a circuit

ac circuit application types and characteristics linquip - Dec 11 2021

jun 29 2022 alternating current circuits or ac circuits are simply circuits powered by an alternating source either current or voltage an alternating voltage or current is one in which the amount of either the voltage or the current alters about a distinct mean value and reverses direction periodically in an ac circuit the source voltage and current

sine of time video ac circuit analysis khan academy - May 16 2022

ω represents the frequency of a sine wave when we write it this way $\sin \omega t$ if $\omega = 1$ the sin completes one cycle in 2π seconds if $\omega = 2\pi$ the sin completes one cycle sooner every 1 second for $f = 1$ if $\omega = 2\pi f$ the sin completes one cycle even faster every $1/f$ seconds or equivalently sin completes f cycles in 1 second
