Statistics Testing And Defense Acquisition:

Statistics, Testing, and Defense Acquisition National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Statistical Methods for Testing and Evaluating Defense Systems, 1999-09-17 The Panel on Statistical Methods for Testing and Evaluating Defense Systems had a broad mandate to examine the use of statistics in conjunction with defense testing This involved examining methods for software testing reliability test planning and estimation validation of modeling and simulation and use of modern techniques for experimental design Given the breadth of these areas including the great variety of applications and special issues that arise making a contribution in each of these areas required that the Panel's work and recommendations be at a relatively general level However a variety of more specific research issues were either brought to the Panel's attention by members of the test and acquisition community e g what was referred to as Dubin's challenge addressed in the Panel's interim report or were identified by members of the panel In many of these cases the panel thought that a more in depth analysis or a more detailed application of suggestions or recommendations made by the Panel would either be useful as input to its deliberations or could be used to help communicate more individual views of members of the Panel to the defense test community This resulted in several research efforts Given various criteria especially immediate relevance to the test and acquisition community the Panel has decided to make available three technical or background papers each authored by a Panel member jointly with a colleague These papers are individual contributions and are not a consensus product of the Panel however the Panel has drawn from these papers in preparation of its final report *Statistics Testing and Defense Acquisition* The Panel has found each of these papers to be extremely useful and they are strongly recommended to readers of the Panel's final report

Testing of Defense Systems in an Evolutionary Acquisition Environment National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Oversight Committee for the Workshop on Testing for Dynamic Acquisition of Defense Systems, 2006-04-13 The Department of Defense DoD recently adopted evolutionary acquisition a dynamic strategy for the development and acquisition of its defense systems Evolutionary defense systems are planned in advance to be developed through several stages in a single procurement program Each stage is planned to produce a viable system which could be fielded The system requirements for each stage of development may be specified in advance of a given stage or may be decided at the outset of that stage's development Due to the different stages that comprise an evolutionary system there exists a need for careful reexamination of current testing and evaluation policies and processes which were designed for single stage developments The Office of the Under Secretary of Defense for Acquisition Technology and Logistics USD AT L and the Director of Operational Testing and Evaluation DOT E asked the Committee on National Statistics CNSTAT of the National Academies to examine the key issues and implications for defense testing from the introduction of evolutionary acquisition The CNSTAT was charged with planning and conducting a workshop to study test

strategies for the evolutionary acquisition The committee reviewed defense materials defining evolutionary acquisition and interviewed test officials from the three major test service agencies to understand the current approaches used in testing systems procured through evolutionary acquisition The committee also examined possible alternatives to identify problems in implementation At the workshop that took place on December 13 14 2004 the committee tried to answer many questions including What are the appropriate roles and objectives for testing in an evolutionary environment Can a systematic disciplined process be developed for testing and evaluation in such a fluid and flexible environment and Is there adequate technical expertise within the acquisition community to fully exploit data gathered from previous stages to effectively combine information from various sources for test design and analysis Testing of Defense Systems in an Evolutionary Acquisition Environment provides the conclusions and recommendations of the CNSTAT following the workshop and its other investigations

Handbook of Engineering Systems Design Anja Maier,Josef Oehmen,Pieter E. Vermaas,2022-07-30 This handbook charts the new engineering paradigm of engineering systems It brings together contributions from leading thinkers in the field and discusses the design management and enabling policy of engineering systems It contains explorations of core themes including technical and socio organisational complexity human behaviour and uncertainty The text includes chapters on the education of future engineers the way in which interventions can be designed and presents a look to the future This book follows the emergence of engineering systems a new engineering paradigm that will help solve truly global challenges This global approach is characterised by complex sociotechnical systems that are now co dependent and highly integrated both functionally and technically as well as by a realisation that we all share the same climate natural resources a highly integrated economical system and a responsibility for global sustainability goals The new paradigm and approach requires the re designing of engineering systems that take into account the shifting dynamics of human behaviour the influence of global stakeholders and the need for system integration The text is a reference point for scholars engineers and policy leaders who are interested in broadening their current perspective on engineering systems design and in devising interventions to help shape societal futures *Industrial Methods for the Effective Development and Testing of Defense Systems* National Research Council,Division on Engineering and Physical Sciences,Board on Army Science and Technology,Division of Behavioral and Social Sciences and Education,Committee on National Statistics,Panel on Industrial Methods for the Effective Test and Development of Defense Systems,2012-02-27 During the past decade and a half the

National Research Council through its Committee on National Statistics has carried out a number of studies on the application of statistical methods to improve the testing and development of defense systems. These studies were intended to provide advice to the Department of Defense (DOD) which sponsored these studies. The previous studies have been concerned with the role of statistical methods in testing and evaluation, reliability practices, software methods, combining information, and evolutionary acquisition. Industrial Methods for the Effective Testing and Development of Defense Systems is the latest in a series of studies, and unlike earlier studies, this report identifies current engineering practices that have proved successful in industrial applications for system development and testing. This report explores how developmental and operational testing, modeling, and simulation, and related techniques can improve the development and performance of defense systems, particularly techniques that have been shown to be effective in industrial applications and are likely to be useful in defense system development. In addition to the broad issues, the report identifies three specific topics for its focus: finding failure modes, earlier technology maturity, and use of all relevant information for operational assessments.

National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, 2002-11-26. The final report of the National Research Council's NRC Panel on Statistical Methods for Testing and Evaluating Defense Systems. National Research Council, 1998. This report was intended to provide broad advice to the U.S. Department of Defense (DoD) on current statistical methods and principles that could be applied to the developmental and operational testing and evaluation of defense systems. To that end, the report contained chapters on the use of testing as a tool of system development, current methods of experimental design, evaluation methods, methods for testing and assessing reliability, availability, and maintainability, software development and testing, and validation of modeling and simulation for use in operational test and evaluation. While the examination of such a wide variety of topics was useful in helping DoD understand the breadth of problems for which statistical methods could be applied and providing direction as to how the methods currently used could be improved, there was quite naturally a lack of detail in each area. To address the need for further detail, two DoD agencies, the Office of the Director of Operational Test and Evaluation and the Office of the Under Secretary of Defense for Acquisition Technology and Logistics, asked the NRC's Committee on National Statistics to initiate a series of workshops on statistical issues relevant to defense acquisition. The aim of each workshop is to inform DoD about the methods that represent the statistical state of the art and, through interactions of the statistical and defense communities, explore their relevance for DoD application.
