Sag, 1987-11-01 A long standing near universal and erroneous practice of teaching syntax in a void exists as if the communicative function of language had nothing to do with syntax And semantics has customarily been taught in sequence after syntax or else not at all Based upon graduate courses taught at Stanford University this work seeks to redress this situation by building up syntactic and semantic aspects of grammatical theory in an integrated way from the start under the assumption that neither is of linguistic interest divorced from the other The particular theory presented head driven phrase structure grammar HPSG so called because of its central notion of the grammatical head is an information based or unification based theory that has its roots in a number of different research programs within linguistics and neighboring disciplines such as philosophy and computer science Thus HPSG draws upon and attempts to synthesize insights and perspectives from several families of contemporary syntactic theories such as categorial grammar lexical functional grammar generalized phrase structure grammar and government binding theory but many of its key ideas arise from semantic theories like situation semantics and discourse representation theory and from computational work in such areas as knowledge representation data type theory and formalisms based upon the unification of partial information *Syntax and Semantics volume 4* John P. One-to-many-relations in morphology, syntax, and semantics Berthold Crysmann, Manfred Sailer, 2021 The standard view of the form meaning interfaces as embraced by the great majority of contemporary grammatical frameworks consists in the assumption that meaning can be associated with grammatical form in a one to one correspondence Under this view composition is quite straightforward involving concatenation of form paired with functional application in meaning In this book we discuss linguistic phenomena across several grammatical sub modules morphology syntax semantics that apparently pose a problem to the standard view mapping out the potential for deviation from the ideal of one to one correspondences and develop formal accounts of the range of phenomena We argue that a constraint based perspective is particularly apt to accommodate deviations from one to many correspondences as it allows us to impose constraints on full structures such as a complete word or the interpretation of a full sentence instead of deriving such structures step by step Most of the papers in this volume are formulated in a particular constraint based grammar framework Head driven Phrase Structure Grammar The contributions investigate how the lexical and constructional aspects of this theory can be combined to provide an answer to this question across different linguistic sub theories

Interrogative Phrases and the Syntax-Semantics Interface I. Comorovski, 2013-04-17 Interrogative Phrases and the Syntax Semantics Interface starts by analyzing the interpretation of interrogative phrases in single and multiple constituent questions including their interpretation under adverbs of quantification The results are then put to work in a novel approach to some of the constraints on dependencies between fronted interrogative phrases and the associated gaps superiority weak crossover as well as the so called weak islands the WH island the negative island and the Factive Island It is argued that the possibility of fronting an interrogative phrase out of these configurations is determined by a semantic pragmatic condition on questions which requires them to be answerable The analysis is worked out principally on Romanian a language which allows multiple wh fronting The results are then extended to English Audience Researchers and students in syntax semantics and their interface as well as linguists studying the relation between the acceptability of sentences and the larger discourse context
