demonstrates how limited users capabilities for providing input data for ML based curation systems are The second part evaluates different explanations of ML based systems This evaluation uncovered an explanatory gap between what is available to explain ML based curation systems and what users need to understand such systems Informed by this explanatory gap the second part of this thesis demonstrates that audits of ML systems can be an important alternative to explanations This demonstration of audits also uncovers a popularity bias enacted by YouTube s ML based curation system Based on these findings the thesis recommends performing audits to ensure that ML based systems act in the public s interest Keywords Algorithmic Bias Algorithmic Experience Algorithmic Transparency Algorithms Fake News Human Centered Machine Learning Human Computer Interaction Machine Learning Artificial Intelligence Recommender Systems Social Media Trust User Beliefs User Experience Video Recommendations YouTube
