The First Computers Guy De la Bédoyère, 2005 One of a series of titles which looks at some key scientific advances of the last century how they came about and their repercussions

The First Computers Raul Rojas, Ulf Hashagen, 2002-07-26 This history of computing focuses not on chronology what came first and who deserves credit for it but on the actual architectures of the first machines that made electronic computing a practical reality The book covers computers built in the United States Germany England and Japan It makes clear that similar concepts were often pursued simultaneously and that the early researchers explored many architectures beyond the von Neumann architecture that eventually became canonical The contributors include not only historians but also engineers and computer pioneers An introductory chapter describes the elements of computer architecture and explains why being first is even less interesting for computers than for other areas of technology The essays contain a remarkable amount of new material even on well known machines and several describe reconstructions of the historic machines These investigations are of more than simply historical interest for architectures designed to solve specific problems in the past may suggest new approaches to similar problems in today's machines Contributors Titiimaea F Ala ilima Lin Ping Ang William Aspray Friedrich L Bauer Andreas Brennecke Chris P Burton Martin Campbell Kelly Paul Ceruzzi I Bernard Cohen John Gustafson Wilhelm Hopmann Harry D Huskey Friedrich W Kistermann Thomas Lange Michael S Mahoney R B E Napper Seiichi Okoma Hartmut Petzold Ra l Rojas Anthony E Sale Robert W Seidel Ambros P Speiser Frank H Sumner James F Tau Jan Van der Spiegel Eitti Wada Michael R Williams

Computer William Aspray, Martin Campbell-Kelly, 1997-06-11 Blending strong narrative history and a fascinating look at the interface of business and technology **Computer A History of the Information Machine** traces the dramatic story of the invention of the computer More than just the tale of a tool created by scientists to crunch numbers this book suggests a richer story behind the computer s creation one that shows how business and government were the first to explore the unlimited potential of the machine as an information processor Not surprisingly at the heart of the business story is IBM A story of old fashioned entrepreneurship in symbiotic relationship with scientific know how it begins way back when computers were people who did the computational work of scientists and Charles Babbage attempted in vain to mechanize the process But it also shows how entrepreneurs like Herman Hollerith seeing a business opportunity in a machine that could mechanically tabulate the U S census created a punched card tabulator that became the technology that created IBM The authors show how ENIAC the first fully electronic computer emerged out of the wartime need of the military for computers that performed at lightning speed and did not need human intervention at any stage of the process Most interesting is the story of how the computer began to reshape broad segments of our society when the PC enabled new modes of computing that liberated people from dependence on room sized enormously expensive mainframe computers Filled with lively insights many about the world of computing in the 1990s such as the strategy behind Microsoft Windows as well as a discussion of the rise and creation of the World Wide Web here is a book no one who owns or uses a computer will want to miss
