Statistical Image Processing and Multidimensional Modeling Paul Fieguth, 2010-10-17
Images are all around us The proliferation of low cost high quality imaging devices has led to an explosion in acquired images When these images are acquired from a microscope telescope satellite or medical imaging device there is a statistical image processing task the inference of something an artery a road a DNA marker an oil spill from imagery possibly noisy blurry or incomplete A great many textbooks have been written on image processing However this book does not so much focus on images per se but rather on spatial data sets with one or more measurements taken over a two or higher dimensional space and to which standard image processing algorithms may not apply There are many important data analysis methods developed in this text for such statistical image problems Examples abound throughout remote sensing satellite data mapping data assimilation climate change studies land use medical imaging organ segmentation anomaly detection computer vision image classification segmentation and other 2D 3D problems biological imaging porous media The goal then of this text is to address methods for solving multidimensional statistical problems The text strikes a balance between mathematics and theory on the one hand versus applications and algorithms on the other by deliberately developing the basic theory Part I the mathematical modeling Part II and the algorithmic and numerical methods Part III of solving a given problem The particular emphases of the book include inverse problems multidimensional modeling random fields and hierarchical methods

Image Processing for Computer Graphics Jonas Gomes, Luiz Velho, 1997
Image processing is a central theme in computer graphics This book provides a modern introduction to both the underlying mathematics and the main concepts and techniques of the subject It covers important modern techniques such as morphing and warping images as well as dithering compositing and other operations on images

Statistical Image Processing Techniques for Noisy Images Phillippe Réfrégier, François

Goudail,2013-11-22 Statistical Processing Techniques for Noisy Images presents a statistical framework to design algorithms for target detection tracking segmentation and classification identification Its main goal is to provide the reader with efficient tools for developing algorithms that solve his her own image processing applications In particular such topics as hypothesis test based detection fast active contour segmentation and algorithm design for non conventional imaging systems are comprehensively treated from theoretical foundations to practical implementations With a large number of illustrations and practical examples this book serves as an excellent textbook or reference book for senior or graduate level courses on statistical signal image processing as well as a reference for researchers in related fields

Image Processing for Computer Graphics and Vision Luiz Velho,Alejandro C. Frery,Jonas Gomes,2009-08-29 Image processing is concerned with the analysis and manipulation of images by computer Providing a thorough treatment of image processing with an emphasis on those aspects most used in computer graphics the authors concentrate on describing and analyzing the underlying concepts rather than on presenting algorithms or pseudocode As befits a modern introduction to this topic a good balance is struck between discussing the underlying mathematics and the main topics signal processing data discretization the theory of colour and different colour systems operations in images dithering and half toning warping and morphing and image processing This second edition reflects recent trends in science and technology that exploit image processing in computer graphics and vision applications Stochastic image models and statistical methods for image processing are covered as are A modern approach and new developments in the area Probability theory for image processing Applications in image analysis and computer vision

Mathematical Morphology in Image Processing Edward Dougherty,2018-10-03 Presents the statistical analysis of morphological filters and their automatic optical design the development of morphological features for image signatures and the design of efficient morphological algorithms Extends the morphological paradigm to include other branches of science and mathematics This book is designed to be of interest to optical electrical and electronics and electro optic engineers including image processing signal processing machine vision and computer vision engineers applied mathematicians image analysts and scientists and graduate level students in image processing and mathematical morphology courses

Image Statistics in Visual Computing Tania Pouli,Erik Reinhard,Douglas W. Cunningham,2013-12-13 To achieve the complex task of interpreting what we see our brains rely on statistical regularities and patterns in visual data Knowledge of these regularities can also be considerably useful in visual computing disciplines such as computer vision computer graphics and image processing The field of natural image statistics studies the regularities to exploit their potential and better understand human vision With numerous color figures throughout Image Statistics in Visual Computing covers all aspects of natural image statistics from data collection to analysis to applications in computer graphics computational photography image processing and art The authors keep the material accessible providing mathematical definitions where appropriate to help readers understand the transforms that highlight statistical regularities present in images The book also

describes patterns that arise once the images are transformed and gives examples of applications that have successfully used statistical regularities Numerous references enable readers to easily look up more information about a specific concept or application A supporting website also offers additional information including descriptions of various image databases suitable for statistics Collecting state of the art interdisciplinary knowledge in one source this book explores the relation of natural image statistics to human vision and shows how natural image statistics can be applied to visual computing It encourages readers in both academic and industrial settings to develop novel insights and applications in all disciplines that relate to visual computing

Image Analysis Applications and Computer Graphics Roland Chin,1995-11-28 When scheduling involves batching decisions as well e g in the presence of sequence dependent setup times difficult problems arise The book presents a problem classification in the area of batching including multi level and parallel machine problems and develops several exact and heuristic algorithms to solve them Special attention is given to the discrete lotsizing and scheduling problem which turns out to be a special batching and scheduling problem in this context The book also contains a comparison of constraint logic programming with mixed integer programming solvers for batching problems *Dynamic Graphics Statistics* Cleveland,1988-07-08 The essential characteristic of a dynamic graphical method is the direct manipulation of elements of a graph on a computer screen which in high performance implementations the elements change virtually instantaneously on the screen This book contains a collection of papers about dynamic graphics dating from the late 1960s to 1988 Although technology has advanced considerably the fundamental ideas about basic graphical principles and data analytic goals are still relevant today

Nondestructive Evaluation of Materials by Infrared Thermography Xavier P.V. Maldague,2012-12-06 With national trade barriers falling causing the expansion of the competitive global market the question of quality control has become an essential issue for the 1990s The time where the promise was to replace a product if it does not work seems to have passed what is more important now is not so much a reduction in what is going wrong but an increase of what is going right the first time Feigenbaum 1990 This new trend is sometimes referred to as total quality Among the many advantages of this zero defect manufacturing policy we can enumerate Laurin 1990 superior marketability of wholly dependable products enormous gain in productivity elimination of waste full cost in replacing poor quality work and retrofitting rejected products from the field Although total quality is a relatively new and attractive concept for mass products such as cars consumer electronics and personal computers in many fields mainly aerospace and military it has been the rule for years because of security reasons

Image Processing and Jump Regression Analysis Peihua Qiu,2005-05-06 The first text to bridge the gap between image processing and jump regression analysis Recent statistical tools developed to estimate jump curves and surfaces have broad applications specifically in the area of image processing Often significant differences in technical terminologies make communication between the disciplines of image processing and jump regression analysis difficult In easy to understand language Image Processing and Jump Regression Analysis builds

a bridge between the worlds of computer graphics and statistics by addressing both the connections and the differences between these two disciplines The author provides a systematic analysis of the methodology behind nonparametric jump regression analysis by outlining procedures that are easy to use simple to compute and have proven statistical theory behind them Key topics include Conventional smoothing procedures Estimation of jump regression curves Estimation of jump location curves of regression surfaces Jump preserving surface reconstruction based on local smoothing Edge detection in image processing Edge preserving image restoration With mathematical proofs kept to a minimum this book is uniquely accessible to a broad readership It may be used as a primary text in nonparametric regression analysis and image processing as well as a reference guide for academicians and industry professionals focused on image processing or curve surface estimation
