A horizontal menu contains buttons for 'Introduction', 'Methods', 'Indicators', 'Tools', 'Country Experiences', and 'Documents'. Introduction Methods Indicators Tools Country Experiences Documents

LABOR STATISTICS describe the size, structure, characteristics, outputs and contributions of the participants in the labor market and how these change over time. From an economic perspective, these statistics are useful to analyze, evaluate and monitor the way the economy is performing and the effectiveness of current and longer term economic policies. From a social perspective, they are useful to achieve decent work, through policies and programs for job creation, training and retraining schemes, and assistance for vulnerable groups, including the young, the aged, women, etc., in finding and securing decent employment.

Conventionally, labor statistics cover a wide range of topics related to the world of work. They include statistics on the size and structure of the economically active population.

The **economically active population** comprises two sub-groups:

1. The employed population and its subgroups, including the underemployed population, those working in the informal economy, child workers, migrant workers, etc; and
2. The unemployed population.
