System Identification Sysid 2000:

System Identification (SYSID 2000) Roy S. Smith, 2001 This Proceedings contains the papers presented at the IFAC Symposium on System Identification held in Santa Barbara USA on 21-23 June 2000. SYSID is IFAC's longest running symposium and has rightly earned a reputation as the most authoritative conference in the field of system identification. The Proceedings of SYSID 2000 lives up to this reputation and contains over 200 important papers devoted to leading edge research in all aspects of system identification. Theoretical aspects of identification are covered by papers on a huge range of topics including robust control, subspace methods, model error modelling, adaptive control, state and parameter estimation and non-linear identification. There are also many papers with application to such areas as biological systems, environmental systems, process control and automotive control. A number of software demonstrations is also presented with direct application to system identification problems.

Symposium on System Identification SYSID 2000, 2000

System Identification 2003 Paul Van Den Hof, Bo Wahlberg, Siep Weiland, 2004-06-29 The scope of the symposium covers all major aspects of system identification: experimental modelling, signal processing and adaptive control ranging from theoretical, methodological and scientific developments to a large variety of engineering application areas. It is the intention of the organizers to promote SYSID 2003 as a meeting place where scientists and engineers from several research communities can meet to discuss issues related to these areas. Relevant topics for the symposium program include: Identification of linear and multivariable systems; identification of nonlinear systems including neural networks; identification of hybrid and distributed systems; Identification for control; experimental modelling in process control; vibration and modal analysis; model validation; monitoring and fault detection; signal processing and communication; parameter estimation and inverse modelling; statistical analysis and uncertainty bounding; adaptive control and data based controller tuning; learning; data mining and Bayesian approaches; sequential Monte Carlo methods including particle filtering; applications in process control systems; motion control systems; robotics; aerospace systems; bioengineering and medical systems; physical measurement systems; automotive systems; econometrics; transportation and communication systems. Provides the latest research on System Identification. Contains contributions written by experts in the field. Part of the IFAC Proceedings Series which provides a comprehensive overview of the major topics in control engineering.

Current Trends in Nonlinear Systems and Control Laura Menini, Luca Zaccarian, Chaouki T. Abdallah, 2006-09-13 This volume is an outgrowth of the workshop Applications of Advanced Control Theory to Robotics and Automation organized in honor of the 70th birthdays of Petar V. Kokotovic and Salvatore Turi Nicosia. Both Petar and Turi have carried out distinguished work in the control community and have long been recognized as mentors as well as experts and pioneers in the field of automatic control covering many topics in control theory and several different applications. The variety of their research is reflected in this book which includes contributions ranging from mathematics to laboratory experiments. The

scope of the work is very broad and although each chapter is self contained the book has been organized into thematically related chapters which in some cases suggest to the reader a convenient reading sequence The great variety of topics covered and the almost tutorial writing style used by many of the authors will make this book suitable for both experts in the control field and young researchers who seek a more intuitive understanding of these relevant topics in the field
