Statistical Methods For The Environmental Sciences:

Statistical Methods for Trend Detection and Analysis in the Environmental Sciences Richard Chandler, Marian Scott, 2011-03-25 The need to understand and quantify change is fundamental throughout the environmental sciences This might involve describing past variation understanding the mechanisms underlying observed changes making projections of possible future change or monitoring the effect of intervening in some environmental system This book provides an overview of modern statistical techniques that may be relevant in problems of this nature Practitioners studying environmental change will be familiar with many classical statistical procedures for the detection and estimation of trends However the ever increasing capacity to collect and process vast amounts of environmental information has led to growing awareness that such procedures are limited in the insights that they can deliver At the same time significant developments in statistical methodology have often been widely dispersed in the statistical literature and have therefore received limited exposure in the environmental science community This book aims to provide a thorough but accessible review of these developments It is split into two parts the first provides an introduction to this area and the second part presents a collection of case studies illustrating the practical application of modern statistical approaches to the analysis of trends in real studies Key Features Presents a thorough introduction to the practical application and methodology of trend analysis in environmental science Explores non parametric estimation and testing as well as parametric techniques Methods are illustrated using case studies from a variety of environmental application areas Looks at trends in all aspects of a process including mean percentiles and extremes Supported by an accompanying website featuring datasets and R code The book is designed to be accessible to readers with some basic statistical training but also contains sufficient detail to serve as a reference for practising statisticians It will therefore be of use to postgraduate students and researchers both in the environmental sciences and in statistics

Environmental Statistics Vic Barnett,2005-12-13 In modern society we are ever more aware of the environmental issues we face whether these relate to global warming depletion of rivers and oceans despoliation of forests pollution of land poor air quality environmental health issues etc At the most fundamental level it is necessary to monitor what is happening in the environment collecting data to describe the changing scene More importantly it is crucial to formally describe the environment with sound and validated models and to analyse and interpret the data we obtain in order to take action *Environmental Statistics* provides a broad overview of the statistical methodology used in the study of the environment written in an accessible style by a leading authority on the subject It serves as both a textbook for students of environmental statistics as well as a comprehensive source of reference for anyone working in statistical investigation of environmental issues Provides broad coverage of the methodology used in the statistical investigation of environmental issues Covers a wide range of key topics including sampling methods for extreme data outliers and robustness relationship models and methods time series spatial analysis and environmental standards Includes many detailed practical and worked examples that illustrate the applications of statistical methods in environmental issues Authored by a leading authority on environmental statistics

Statistics for Environmental Science and Management Bryan F. J. Manly,2000-09-21 The use of appropriate statistical methods is essential when working with environmental data Yet many environmental professionals are not statisticians A ready reference guide to the most common methods used in environmental applications *Statistics for Environmental Science and Management* introduces the statistical methods most frequently used by environmental scientists managers and students Using a non mathematical approach the author describes techniques such as environmental monitoring impact assessment assessing site reclamation censored data and Monte Carlo risk assessment as well as the key topics of time series and spatial data The book shows the strengths of different types of conclusions available from statistical analyses It contains internet sources of information that give readers access to the latest information on specific topics The author's easy to understand style makes the subject matter accessible to anyone with a rudimentary knowledge of the basics of statistics while emphasizing how the techniques are applied in the environmental field Clearly and copiously illustrated with line drawings and tables *Statistics for Environmental Science and Management* covers all the statistical methods used with environmental applications and is suitable as a text for graduate students in the environmental science area

Hierarchical Modelling for the Environmental Sciences James Samuel Clark,Alan E. Gelfand,2006 New statistical tools are changing the ways in which scientists analyze and interpret data and models Many of these are emerging as a result of the wide availability of inexpensive high speed computational power In particular hierarchical Bayes and Markov Chain Monte Carlo methods for analysis provide consistent framework for inference and prediction where information is heterogeneous and uncertain processes are complex and responses depend on scale Nowhere are these methods more

promising than in the environmental sciences Models have developed rapidly and there is now a requirement for a clear exposition of the methodology through to application for a range of environmental challenges

Practical Statistics for Environmental and Biological Scientists John Townend, 2013-04-30 All students and researchers in environmental and biological sciences require statistical methods at some stage of their work Many have a preconception that statistics are difficult and unpleasant and find that the textbooks available are difficult to understand Practical Statistics for Environmental and Biological Scientists provides a concise user friendly non technical introduction to statistics The book covers planning and designing an experiment how to analyse and present data and the limitations and assumptions of each statistical method The text does not refer to a specific computer package but descriptions of how to carry out the tests and interpret the results are based on the approaches used by most of the commonly used packages e g Excel MINITAB and SPSS Formulae are kept to a minimum and relevant examples are included throughout the text

Statistics for Earth and Environmental Scientists John H. Schuenemeyer, Lawrence J. Drew, 2011-04-12 A comprehensive treatment of statistical applications for solving real world environmental problems A host of complex problems face today s earth science community such as evaluating the supply of remaining non renewable energy resources assessing the impact of people on the environment understanding climate change and managing the use of water Proper collection and analysis of data using statistical techniques contributes significantly toward the solution of these problems Statistics for Earth and Environmental Scientists presents important statistical concepts through data analytic tools and shows readers how to apply them to real world problems The authors present several different statistical approaches to the environmental sciences including Bayesian and nonparametric methodologies The book begins with an introduction to types of data evaluation of data modeling and estimation random variation and sampling all of which are explored through case studies that use real data from earth science applications Subsequent chapters focus on principles of modeling and the key methods and techniques for analyzing scientific data including Interval estimation and Methods for analyzing hypothesis testing of means time series data Spatial statistics Multivariate analysis Discrete distributions Experimental design Most statistical models are introduced by concept and application given as equations and then accompanied by heuristic justification rather than a formal proof Data analysis model building and statistical inference are stressed throughout and readers are encouraged to collect their own data to incorporate into the exercises at the end of each chapter Most data sets graphs and analyses are computed using R but can be worked with using any statistical computing software A related website features additional data sets answers to selected exercises and R code for the book s examples Statistics for Earth and Environmental Scientists is an excellent book for courses on quantitative methods in geology geography natural resources and environmental sciences at the upper undergraduate and graduate levels It is also a valuable reference for earth scientists geologists hydrologists and environmental statisticians who collect and analyze data in their everyday work

Statistics in Genetics and in the

Environmental Sciences Luisa T. Fernholz, Stephan Morgenthaler, Werner Stahel, 2012-12-06 Statistics is strongly tied to applications in different scientific disciplines and the most challenging statistical problems arise from problems in the sciences. In fact, the most innovative statistical research flows from the needs of applications in diverse settings. This volume is a testimony to the crucial role that statistics plays in scientific disciplines such as genetics and environmental sciences among others. The articles in this volume range from human and agricultural genetic DNA research to carcinogens and chemical concentrations in the environment and to space debris and atmospheric chemistry. Also included are some articles on statistical methods which are sufficiently general and flexible to be applied to many practical situations. The papers were refereed by a panel of experts and the editors of the volume. The contributions are based on the talks presented at the Workshop on Statistics and the Sciences held at the Centro Stefano Franscini in Ascona, Switzerland, during the week of May 23 to 28, 1999. The meeting was jointly organized by the Swiss Federal Institutes of Technology in Lausanne and Zurich with the financial support of the Minerva Research Foundation. As the presentations at the workshop helped the participants recognize the potential role that statistics can play in the sciences, we hope that this volume will help the reader to focus on the central role of statistics in the specific areas presented here and to extrapolate the results to further applications.

Bock, Jamie A. Goode, 2008-04-30 Environmental statistics is a rapidly growing discipline that is important not only as a division of professional and academic statistics but also in the accumulation of data on environmental effects and in the formulation of environmental policy by government agencies This book features contributions from policy makers scientists actively involved in collection of data and professional academic and government statisticians These explore the interfaces between the different areas of application of environmental statistics and consider the future applications of methods arising from this discipline Some of the chapters deal specifically with environmental models and methods Here the contributors explain specialized statistical techniques that have been developed for analysing environmental data and mathematical models that have been applied to the problem of integrating large amounts of environmental data into a coherent picture of particular environmental systems Several of the contributions deal specifically with the problems involved in co ordinating data collection over large geographical areas and over many dimensions of measurement Finally the book discusses the problems of formulating specific environmental policies given the nature of the information that has been made available using environmental statistical methods From Experimental Network to

Meta-analysis David Makowski, François Piraux, François Brun, 2019-05-07 This book has been designed as a methodological guide and shows the interests and limitations of different statistical methods to analyze data from experimental networks and to perform meta analyses It is intended for engineers students and researchers involved in data analysis in agronomy and environmental science
