Approaches for Dealing with Small Sample Sizes in Employment Discrimination Litigation Michael J. Piette, Paul F. White, 2015 The focus of all statistical analyses of alleged employment discrimination is to compare the treatment of similarly situated individuals Economists and statisticians as experts offering quantitative support for or against allegations of employment discrimination are now commonplace in the courtroom Although there is a rich and growing literature dealing with the tools and techniques used by these experts in large class action litigation relatively little of this literature addresses the problems associated with the approaches that may be used when the sample size being analyzed is small The purpose of this paper is to outline the problems of developing statistical analysis involving small sample size problems and to present techniques for dealing with this problem The paper provides several hypothetical examples of employment discrimination cases involving small sample sizes illustrates alternative statistical techniques that can be used and discusses the important consideration of the differences between statistical significance and practical significance **Government Discrimination** James A. Kushner, 2007 *Practitioner's Guide to Legal Issues in Organizations* Chester Hanvey, Kayo Sady, 2015-05-26 This highly useful reference outlines best practices in key areas of human resources that are not only fair and equitable but that can withstand legal scrutiny Industrial organizational experts apply their empirical knowledge and practical experience to aspects of HR that are commonly litigated including broad and specific topics in testing of potential employees disability issues compensation and pay equity and work hours The book is written to be accessible to readers currently in HR related graduate level training as well as HR practitioners with or without background in industrial organizational psychology And to add to its utility chapters feature practical strategies for addressing each of the legal issues presented Among the topics covered Measuring adverse impact in employee selection decisions Using background checks in the employee selection process Disabilities best practices for vulnerabilities associated with the ADA Physical abilities testing Wage and hour litigation Clinical psychological testing for employee selection Conducting compensation equity analyses Practitioner's Guide to Legal Issues in Organizations brings clear up to date information to graduate students studying human resources

Improved Statistical Methods for the Calculation of Damages in Discrimination Lawsuits Scott Susin,2017 This paper develops a new method to calculate individual specific damage payments in discrimination lawsuits using empirical Bayes techniques and a simple random coefficients model The method yields payments that can be mathematically proven to be more accurate than existing statistically based approaches as measured by the mean squared error This method also provides a natural justification for zero payments to members of the non injured class and substantially reduces the bias caused by the legal restriction on negative payments We empirically demonstrate our method in the context of mortgage pricing decisions using detailed loan level data from a large subprime lender *Modern Scientific Evidence* David Laurence Faigman,2002
