The Neutral Stars:

The Lives of the Neutron Stars M. A. Alpar, Ü Kızıloğlu, Jan van Paradijs, 1995 This NATO ASI was the third in the series of Advanced Study Institutes on neutron stars which started with Timing Neutron Stars held in Qe me near izmir Turkey April 1988 followed by Neutron Stars an Interdisciplinary Subject held in Agia Pelagia on the island of Crete September 1990 The first school centered on our main observational access to neutron stars i.e. the timing of radio pulsars and accretion powered neutron stars and on what timing of neutron stars teaches us of their structure and environment The second school had as its theme the interplay between diverse areas of physics which find interesting even exotic applications in the extreme conditions of neutron stars and their magnetospheres As the field has developed with the number of observed neutron stars rapidly increasing and our knowledge of many individual neutron stars getting deeper and more detailed an evolutionary picture of neutron stars has started to emerge This led us to choose *The Lives of the Neutron Stars* as the unifying theme of this third Advanced Study Institute on neutron stars Different types of neutron star activity have been proposed to follow one another in stages during the lives of neutron stars in the same basic population the evolutionary connection between low mass X ray binaries and millisecond radio pulsars is perhaps the prime example *The Electromagnetic Spectrum of Neutron Stars* Altan Baykal, Sinan K. Yerli, Sitki C. Inam, Sergei Grebenev, 2006-01-20 Neutron stars hold a central place in astrophysics not only because they are made up of the most extreme states of the condensed matter but also because they are along with white dwarfs and black holes one of the stable configurations that stars reach at the end of stellar evolution Neutron stars possess the highest rotation rates and strongest magnetic fields among all stars They radiate prolifically in high energy electromagnetic radiation and in the radio band This book is devoted to the selected lectures presented in the 6th NATO ASI series entitled *The Electromagnetic Spectrum of Neutron Stars* in Marmaris Turkey on 7-18 June 2004 This ASI is devoted to the spectral properties of neutron stars Spectral observations of neutron stars help us to understand the magnetospheric emission processes of isolated radio pulsars and the emission processes of accreting neutron stars This volume includes spectral information from the neutron stars in broadest sense namely neutrino and gravitational radiation along with the electromagnetic spectrum We believe that this volume can serve as graduate level of text including the broad range of properties of neutron stars *The Physics and Astrophysics of Neutron Stars* Luciano Rezzolla, Pierre Pizzochero, David Ian Jones, Nanda Rea, Isaac Vidana, 2019-01-09 This book summarizes the recent progress in the physics and astrophysics of neutron stars and most importantly it identifies and develops effective strategies to explore both theoretically and observationally the many remaining open questions in the field Because of its significance in the solution of many fundamental questions in nuclear physics astrophysics and gravitational physics the study of neutron stars has seen enormous progress over the last years and has been very successful in improving our understanding in these fascinating compact objects The book addresses a wide spectrum of readers from students to senior researchers Thirteen chapters

written by internationally renowned experts offer a thorough overview of the various facets of this interdisciplinary science from neutron star formation in supernovae pulsars equations of state super dense matter gravitational wave emission to alternative theories of gravity The book was initiated by the European Cooperation in Science and Technology COST Action MP1304 Exploring fundamental physics with compact stars NewCompStar
