called the Steiner minimum tree The Steiner minimum tree may contain some vertices which are not the given points Those vertices are called Steiner points while the given points are called terminals The shortest network for three terminals was first studied by Fermat 1601 1665 Fermat proposed the problem of finding a point to minimize the total distance from it to three terminals in the Euclidean plane The direct generalization is to find a point to minimize the total distance from it to n terminals which is still called the Fermat problem today The Steiner minimum tree problem is an indirect generalization Schreiber in 1986 found that this generalization i e the Steiner minimum tree was first proposed by Gauss The Year Book of the Child Federation, Philadelphia, Pennsylvania Child Federation,1914 Prince Harold Levant Frederick
