Development After COVID-19 Augustine Edobor Arimoro, Ezinne Mirian Igbokwe, Tamaraudoubra Tom Egbe, 2024-06-18

This book considers the impact of the COVID 19 pandemic on the realisation of the United Nations Sustainable Development Goals. Although efforts towards the attainment of the Sustainable Development Goals are ongoing, the COVID 19 pandemic has had a significant impact on these efforts, accentuating inequities as well as absorbing resources. This book addresses this impact as it takes up the question of how to ensure global recovery in line with the target for the Sustainable Development Goals after the pandemic. Adopting an interdisciplinary approach but focusing particularly on the role of law and legal frameworks in this recovery, the book considers the effect of the pandemic on key industries such as shipping, insurance, manufacturing, and banking, as well as on the role of the State and non-State actors. Pursuing an explicitly Global South perspective, the book maintains that in the post-COVID era, it is the elaboration of a rule of law framework that is in sync with both the Global North and South that is crucial if the Sustainable Development Goals are to be achieved. This book will be of value to scholars, students, and policymakers working in the general area of law and development, but especially those with specific interests in the United Nations Sustainable Development Goals.

Microplastic in the Environment: Pattern and Process Michael S. Bank, 2021-10-09. This open access book examines global plastic pollution, an issue that has become a critical societal challenge with implications for environmental and public health. This volume provides a comprehensive holistic analysis on the plastic cycle and its subsequent effects on biota, food security, and human exposure. Importantly, global environmental change and its associated systems-level processes, including atmospheric deposition, ecosystem complexity, UV exposure, wind patterns, water stratification, ocean circulation, etc., are all important direct and indirect factors governing the fate, transport, and biotic and abiotic processing of plastic particles across ecosystem types. Furthermore, the distribution of plastic in the ocean is not independent of terrestrial ecosystem dynamics, since much of the plastic in marine ecosystems originates from land and should therefore be evaluated in the context of the larger plastic cycle. Changes in species size, distribution, habitat, and food web complexity due to global environmental change will likely alter trophic transfer dynamics and the ecological effects of nano and microplastics. The fate and transport dynamics of plastic particles are influenced by their size, form, shape, polymer type, additives, and overall ecosystem conditions. In addition to the risks that plastics pose to the total environment, the potential impacts on human health and exposure routes, including seafood consumption and air and drinking water, need to be assessed in a comprehensive and quantitative manner. Here, I present a holistic and interdisciplinary book volume designed to advance the understanding of plastic cycling in the environment, with an emphasis on sources, fate, and transport, ecotoxicology, climate change effects, food security, microbiology, sustainability, human exposure, and public policy.
