Targeted Molecular Imaging In Oncology:

Targeted Molecular Imaging in Oncology E. Edmund Kim, David J. Yang, 2013-06-29 Cancer cells dedifferentiate with respect to cell function their vascularity is more leaky but perfusion is heterogeneously reduced and interstitial fluid pressure is high severely retarding delivery of agents from the blood Targeted imaging is designed to produce a detectable difference between tissue that is visualized with single photon and positron emission tomography magnetic resonance imaging computed tomography or ultrasonography This book uniquely reports strategies for the application of molecular targeted imaging agents such as antibodies peptides receptors and contrast agents in the biologic grading of tumors differential diagnosis of tumors prediction of therapeutic response and monitoring tumor response to treatment This book also describes updated information about the imaging of tumor angiogenesis hypoxia apoptosis and gene delivery as well as expression in the understanding and utility of tumor molecular biology for better cancer management

Molecular Imaging in Oncology Otmar Schober, Burkhard Riemann, 2012-11-28 The impact of molecular imaging on diagnostics therapy and follow up in oncology is increasing steadily Many innovative molecular imaging probes have already entered clinical practice and there is no doubt that the future emphasis will be on multimodality imaging in which morphological functional and molecular imaging techniques are combined in a single clinical investigation This handbook addresses all aspects of molecular imaging in oncology from basic research to clinical applications The first section is devoted to technology and probe design and examines a variety of PET and SPECT tracers as well as multimodality probes Preclinical studies are then discussed in detail with particular attention to multimodality imaging In the third section diverse clinical applications are presented and the book closes by looking at future challenges This handbook will be of value to all who are interested in the revolution in diagnostic oncology that is being brought about by molecular imaging
