

The diagram illustrates a geothermal heating cycle. It shows a house with a grey roof and yellow walls. A cross-section of the ground reveals a network of pipes: a blue loop in the foreground and a red loop extending from the house into the ground. The ground is depicted in layers of brown soil and grey rock. Five numbered steps describe the process: 1. Sun's energy warms the ground. 2. Cold fluid is pumped out of the house. 3. Fluid in the loop absorbs heat from the ground. 4. The loop carries heated fluid into the building. 5. The heat pump transfers heat to the home. Arrows indicate the flow of fluid and heat.

**1** Energy of the sun warms the ground

**2** Cold fluid pumped out of house

**3** Fluid in loop absorbs heat from the ground
