1. Why get vaccinated?

Vaccines can prevent disease. Childhood vaccination is essential because it helps provide immunity before children are exposed to potentially life-threatening diseases.

Diphtheria, tetanus, and pertussis (DTaP)

- **Diphtheria** (D) can lead to difficulty breathing, heart failure, paralysis, or death.
- **Tetanus** (T) causes painful stiffening of the muscles. Tetanus can lead to serious health problems, including being unable to open the mouth, having trouble swallowing and breathing, or death.
- **Pertussis** (P), also known as "whooping cough," can cause uncontrollable, violent coughing that makes it hard to breathe, eat, or drink. Pertussis can be extremely serious, especially in babies and young children, causing pneumonia, convulsions, brain damage, or death.

Hib (Haemophilus influenzae type B) disease

Haemophilus influenzae type B can cause many different kinds of infections. Hib bacteria can cause mild illness, such as ear infections or sinusitis, or they can cause severe illness, such as infections of the blood. Hib infections can also cause pneumonia, severe swelling in the throat, making it hard to breathe, and infections of the brain, joints, bones, and covering of the brain. Severe Hib infections, also called "invasive Hib disease," require treatment in a hospital and can sometimes result in death.

Hepatitis B

Hepatitis B is a liver disease that can cause mild illness lasting a few weeks, or it can lead to a serious, lifelong illness. Acute hepatitis B infection is a short-term illness that can lead to fever, fatigue, loss of appetite, nausea, vomiting, jaundice (yellow skin or eyes), dark urine, clay-colored bowel movements, and pain in the stomach, joints, and muscles. Chronic hepatitis B infection is a long-term illness that occurs when the hepatitis B virus remains in a person's body. Most people who get an acute hepatitis B infection do not have symptoms, but it is still very serious and can lead to liver damage, liver failure, liver cancer, and death.

Pneumococcal disease (PCV)

Pneumococcal disease refers to any illness caused by pneumococcal bacteria. These bacteria can cause many types of illnesses, including pneumonia, which is an infection of the lungs. Bacterial pneumonia, pneumococcal bacteria can also cause ear infections, sinus infections, meningitis (infections of the brain covering the brain and spinal cord), and bacteremia (infection of the blood). Most pneumococcal infections are mild. However, some can result in long-term problems, such as brain damage or hearing loss. Meningitis, bacteremia, and pneumonia caused by pneumococcal disease can be fatal.
