

Differential Equations

Ordinary Differential Equation

It is a differential equation that involves one or more ordinary derivatives but without having partial derivatives.

$$m \frac{d^2x}{dt^2} = f(x)$$

Partial Differential Equation

Partial differential equation is a differential equation that involves partial derivatives. It has two or more independent variables.

$$\frac{\partial^2 u}{\partial x^2} + 4xy \frac{\partial^2 u}{\partial y^2} + u = 2 \left(\frac{\partial^2 u}{\partial x^2} \right)^2 + 4 \frac{\partial^3 u}{\partial x \partial y^2} = 10x$$

Linear Differential Equation

It is first degree with respect to the dependent variable(s) and its derivatives that can be expressed in the form

$$\frac{dy}{dx} + p(x)y = q(x)$$

Non-Linear Differential Equation

It is second degree or higher with respect to dependent variables and its derivatives.

$$\frac{d^2y}{dx^2} - \left(\frac{dy}{dx} \right)^2 + 12y = \cos x$$

Homogeneous Differential Equation

It is first order differential equation which can be written as,

$$y'' + f(x)y' + g(x)y = 0$$

Non-homogeneous Differential Equation

It is a differential equation whose right-hand side is not equal to zero. A 2nd order non-homogeneous equation can be written in this form.

$$y'' + f(x)y' + g(x)y = r(x)$$

Ordinary Differential Equations William A. Adkins, Mark G. Davidson, 2012-07-01 Unlike most texts in differential equations this textbook gives an early presentation of the Laplace transform which is then used to motivate and develop many of the remaining differential equation concepts for which it is particularly well suited For example the standard solution methods for constant coefficient linear differential equations are immediate and simplified and solution methods for constant coefficient systems are streamlined By introducing the Laplace transform early in the text students become proficient in its use while at the same time learning the standard topics in differential equations The text also includes proofs of several important theorems that are not usually given in introductory texts These include a proof of the injectivity of the Laplace transform and a proof of the existence and uniqueness theorem for linear constant coefficient differential equations Along with its unique traits this text contains all the topics needed for a standard three or four hour sophomore level differential equations course for students majoring in science or engineering These topics include first order differential equations general linear differential equations with constant coefficients second order linear differential equations with variable coefficients power series methods and linear systems of differential equations It is assumed that the reader has had the equivalent of a one year course in college calculus

The Encyclopædia Britannica, 1911 Calculus of Variations and Partial Differential Equations Luigi Ambrosio, Norman Dancer, 2012-12-06 At the summer school in Pisa in September 1996 Luigi Ambrosio and Norman Dancer each gave a course on the geometric problem of evolution of a surface by mean curvature and degree theory with applications to PDEs respectively This self contained presentation accessible to PhD students bridged the gap between standard courses and advanced research on these topics The resulting book is divided accordingly into 2 parts and neatly illustrates the 2 way interaction of problems and methods Each of the courses is augmented and complemented by additional short chapters by other authors describing current research problems and results
