Complexity Thinking

An organization is a complex adaptive system (CAS), because it consists of parts (people) that form a system (organization), which shows complex behavior while it keeps adapting to a changing environment.

Faced with complexity, the traditional instinct of the practical manager has been to try to reduce the complexity through rules of thumb, standard operating procedures, and so on.
– Hugo Letiche, *Coherence in the Midst of Complexity*

Example of typical mistake:
Trying to control the future rather than discovering it.

You cannot control a complex system, but you have many options for guiding it.

Example of typical mistake:
Thinking about numbers and not about people.

$$2138^{10} = p + 3q^2 = (p - 3q^2)^{10} = (p - 3q)^2 = (p - 3q)^2 = p^2 - 6pq + 9q^2 = p^2 - 6pq + 9q^2$$

Thinking in Complexity Klaus Mainzer,2013-03-09 The second edition of Thinking in Complexity like the first edition was also sold out in less than one year Meanwhile Japanese and Chinese translations of the second edition have been published Once more I have taken the opportunity provided by a new edition to revise and extend the text A new Sect 2.5 Complex Systems and the Self Construction of Materials is included in order to analyze the role of complex systems in the dramatic success of supramolecular chemistry nanotechnology and the technology of smart intelligent materials These topics lie at the boundary between materials science and life science In recent years life science and computer science have been growing together in a common field of research called artificial life A further new Sect 5.5 From Artificial Intelligence to Artificial Life has been added in which the role of complex systems in the field of artificial life is discussed I also use the opportunity of the new edition to make some remarks about the relationship between the Santa Fe approach to complex systems and the methods of synergetics and order parameters which are key concepts in this book Research into complex systems continues world wide I have to thank the readers who have written friendly and inspiring letters from all over the world Some months ago a German Society of Complex Systems and Nonlinear Dynamics was founded

Thinking in Complexity Klaus Mainzer,2007-09-07 The theory of nonlinear complex systems has become by now a proven problem solving approach in the natural sciences And it is now also recognized that many if not most of our social ecological economical and political problems are essentially of a global complex and nonlinear nature And it is now further accepted than any holistic perspective of the human mind and brain can hardly be achieved by any other approach In this wide ranging scholarly but very concise treatment physicist computer scientist and philosopher Klaus Mainzer discusses in essentially nontechnical language the common framework behind these ideas and challenges Emphasis is given to the evolution of new structures in natural and cultural systems and we are lead to see clearly how the new integrative approach can give insights not available from traditional reductionistic methods The fifth edition enlarges and revises almost all sections and supplements an entirely new chapter on the complexity of economic systems From the reviews of the fourth edition this highly recommended book is a wonderful resource for intuitive basic ideas in the need of rigorous formulation Albert A Mullin Zentralblatt MATH

Thinking in Complexity ... Mainzer,1997 *Thinking in Complexity* Klaus Mainzer,2003-09-09 This new edition also treats smart materials and artificial life A new chapter on information and computational dynamics takes up many recent discussions in the community *New Thinking in Complexity for the Social Sciences and Humanities* Ton Jörg,2011-08-09 The underlying idea and motive for the book is that the notion of complexity may humanize the social sciences may conceive the complex human being as more human and turn reality as assumed in our doing social science into a more complex that is a richer reality for all The main focus of this book is on new thinking in complexity with complexity to be taken as derived from the Latin word complexus that which is interwoven The trans disciplinary approach advocated here will be trans

disciplinary in two ways firstly by going beyond the separate disciplines within the fields of both natural sciences and social sciences and secondly by going beyond the separate cultures of the natural sciences and of the social sciences and humanities
