# Visual Space Perception

**Clarence Henry Graham**

## **Visual Space Perception:**

*Visual Space Perception* William H. Ittelson, 1960

**Visual Space Perception and Action** Jochen Müsseler, A. H. C. van der Heijden, Dirk Kerzel, 2004 Vision is not an end in itself. Instead, it has evolved to assure survival in a dynamic environment. Vision, as well as the other senses, evolved from the necessity to act in this environment. Therefore, perceptual processes and action planning are much more interlocked than evident at first sight. This special issue examines the basic processes of space perception and how these processes interact with action planning and motor control. The tasks under consideration range from the simple localization of a single object to the coordination of a series of events in natural scenes. The contributions were written by various experts in the field, ranging from experimental psychologists, neurophysiologists, to computational modellers and philosophers. Each contribution introduces new concepts and ideas that explain how visual space is being established and represented. The overarching question is whether vision and action are based on a single spatial map or on different interacting spatial representations.

*The Perception and Cognition of Visual Space* Paul Linton, 2017-08-28 This book explores a central question in the study of depth perception: does the visual system rely upon objective knowledge and subjective meaning to specify visual depth? Linton advances an alternative interpretation to the generally accepted affirmative answer, according to which many of the apparent contributions of knowledge and meaning to depth perception are better understood as contributions to our post-perceptual cognition of depth. In order to defend this position, a new account of visual cognition is required, as well as a better understanding of the optical and physiological cues to depth. This book will appeal to students and researchers in psychology, vision science, and philosophy, as well as to technologists and content creators working in virtual and augmented reality.

**The Geometries of Visual Space** Mark Wagner, 2012-11-12 When most people think of space, they think of physical space. However, visual space concerns space as consciously experienced, and it is studied through subjective measures such as asking people to use numbers to estimate perceived distances, areas, angles, or volumes. This book explores the mismatch between perception and physical reality and describes the many factors that influence the perception of space, including the meaning assigned to geometric concepts like distance, the judgment methods used to report the experience, the presence or absence of cues to depth, and the orientation of a stimulus with respect to point of view. The main theme of the text is that no single geometry describes visual space, but that the geometry of visual space depends upon the stimulus conditions and mental shifts in the subjective meaning of size and distance. In addition, *The Geometries of Visual Space* contains philosophical, mathematical, and psychophysical background material, looks at synthetic approaches to space perception, including work on hyperbolic, spherical, and Euclidean geometries, presents a meta-analysis of studies that ask observers to directly estimate size, distance, area, angle, and volume, looks at the size constancy literature in which observers are asked to adjust a comparison stimulus to match a variety of standards at different distances away, discusses research that

takes a multi dimensional approach toward studying visual space and discusses how spatial experience is influenced by memory While this book is primarily intended for scholars in perception mathematical psychology and psychophysics it will also be accessible to a wider audience since it is written at a readable level It will make a good graduate level textbook on space perception *Visual Perception* Nicholas Wade,Michael Swanston,2001 This work covers the perception of location motion and object recognition and places the study of vision in its historical context The machinery of vision is also described

**The Role of Convergence in Visual Space Perception** Claes von Hofsten,1974 *Visual Space Perception Through Motion* Gunnar Johansson,1980 **Studies in Auditory and Visual Space Perception** Arthur Henry Pierce,1901

Some Theories of Visual Space August William Weber,1902 *The Primacy of Depth in Visual Perception* Robert Fox,VANDERBILT UNIV NASHVILLE TN DEPT OF PSYCHOLOGY.,1981 This report is a slightly edited version of an invited address New Fellows Address given by the writer at the national convention of the American Psychological Association in Los Angeles on August 28 1981 The implications of several kinds of recent investigations of three dimensional visual space perception are discussed including investigations performed by the writer and his colleagues and summarized in Contour Interaction in Visual Space The results of all investigations are interpreted as supporting the claim that the X Y Z position of objects in visual space is processed quite early by the visual system This initial identification of the loci of objects in space serves to control subsequent analysis of the characteristics of those objects This interpretation supports a general theory of visual space perception that assumes there is an internal continuous representation of visual space within the visual system This representation is assumed to be an intrinsic hardwired characteristic of that system Conversely support is not given to an alternative general theory of space perception that assumes depth information is processed relatively late in the visual system by an analysis of specific cues to distances cues which acquire their significance gradually by repeated exposure to the environment Studies in Auditory and Visual Space Perception Arthur Henry Pierce, *The Importance of Optical*

*Motions for Visual Space Perception in Man* John Cameron Hay,1961 **Structures of Visual Space Perception in Architecture** Bruce E. Constant,1973 *Virtual and Adaptive Environments* Lawrence J. Hettinger,Michael W. Haas,2003-06-01 With contributions from a collection of authors consisting of many recognizable experts in the field of virtual and adaptive environments as well as many up and coming young researchers this book illustrates the many ways in which psychological science contributes to and benefits from the increased development and application of these nascent systems Discussing issues from both a user and technology based standpoint the volume examines the use of human perception cognition and behavior The book builds a foundation on the assumption that these systems are first and foremost human centered technologies in that their purpose is to complement and extend human capabilities across a wide variety of domains **Brain and Behaviour** Jules Davidoff,2000 *Visual Space Perception and Action: Introductory Remarks* Jochen Müsseler,A.
