The Adaptive Brain II Stephen Grossberg, 2013-10-22 The Adaptive Brain II Vision Speech Language and Motor Control focuses on a unified theoretical analysis and predictions of important psychological and neurological data that illustrate the development of a true theory of mind and brain The publication first elaborates on the quantized geometry of visual space and neural dynamics of form perception Discussions focus on reflectance rivalry and spatial frequency detection figure ground separation by filling in barriers and disinhibitory propagation of functional scaling from boundaries to interiors The text then takes a look at neural dynamics of perceptual grouping and brightness perception Topics include simulation of a parametric binocular brightness study smoothly varying luminance contours versus steps of luminance change macrocircuit of processing stages paradoxical percepts as probes of adaptive processes and analysis of the Beck theory of textural segmentation The book examines the neural dynamics of speech and language coding and word recognition and recall including automatic activation and limited capacity attention a macrocircuit for the self organization of recognition and recall role of intra list restructuring and contextual associations and temporal order information across item representations The manuscript is a vital source of data for scientists and researchers interested in the development of a true theory of mind and brain

Adaptive Spatial Alignment Gordon M. Redding, Benjamin Wallace, 2013-06-17 For most people prism adaptation is an amusing demonstration first experienced perhaps in an introductory psychology course This monograph relates this peculiar phenomenon to the larger context of cognitive science especially motor control and learning The first part sketches the background concepts necessary to understand the contribution of prism adaptation to the larger issue of adaptive perceptual motor performance including a review of the basic concepts of motor control and learning that enable strategic response in the prism adaptation situation the development of a hypothesis about spatial representation and spatial mapping and an introduction to the basic idea of adaptive spatial alignment and a contrasting view of perceptual and motor learning and a review of evidence for the involvement of nonassociative and associative learning in prism adaptation Directly concerned with data and theory in prism adaptation the second part presents an outline of prism adaptation methodology and a list of several empirical conclusions from previous research that constrained development of theoretical framework a theory of strategic perceptual motor control and learning which enables adaptive performance during prism exposure but does not directly involve adaptive spatial alignment an extension of the theory to include realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework The last part of this volume reviews the research conducted in developing and testing the present theory of prism adaptation It summarizes the initial investigations employing a naturalistic exposure setting reports some more rigorous tests with an experimentally

constrained research paradigm points out the more general theoretical issues raised by the authors analysis of prism adaptation and makes specific suggestions for further research within the prism adaptation paradigm Psychology of Learning and Motivation ,1993-12-07 With a long standing tradition for excellence this series is a collection of quality papers that are widely read by researchers in cognitive and experimental psychology Each chapter thoughtfully integrates the writings of leading contributors who present and discuss significant bodies of research relevant to their discipline
