This interest has grown along with the concern over global warming due to increasing levels of CO₂ and trace gases. A stage has been reached where investigators of climate-sea level relationships call for long-term measurement programmes for ice volume changes using satellite altimetry and changes in temperature and salinity of the oceans thermal expansion. This manual however is primarily concerned with sea level changes in the past mainly since the end of the last glaciation. Its major objective is to help answer the question how which of course is little else but to assist in the gathering of fuel for the burning question why. Good fuel hopefully for the less smoke and ashes and the more heat and light produced by that fire the better scientists are enabled to develop a quantitative understanding of past and hence of future sea level changes on different spatial and temporal scales.
