Theoretical Studies In Computer Science:

Creating Theoretical Research Frameworks using Multiple Methods Sergey V. Samoilenko, Kweku-Muata Osei-Bryson, 2017-10-30 By now it is commonly accepted that investments in information and communication technologies ICTs can facilitate macroeconomic growth in developed countries Research standards in ICT for development ICT4D are high and it is a basic expectation that a theoretically sound conceptual investigation should yield actionable results An additional expectation is that an on the ground study conducted in each setting should add to the common body of knowledge based on theory In other words one is expected to make a connection between the world of concepts and the world of reality Middle range theories and frameworks could help connect the case studies with grand theories by helping to create a theoretically sound and practically applicable research architecture of ICT4D This book demonstrates how creative use of various data analysis methods e g data mining DM data envelopment analysis DEA and structural equation modeling SEM and conceptual frameworks e g neoclassical growth accounting chaos and complexity theories may be utilized for inductive and deductive purposes to develop and to test in step by step fashion theoretically sound frameworks for a large subset of ICT4D research questions Specifically this book showcases the utilization of DM DEA and SEM for the following purposes Identification of the relevant context specific constructs inductive application Identification of the relationships between the constructs inductive application Development of a framework incorporating the constructs and relationships discovered inductive application Testing of the constructed framework deductive application The book takes a multi theoretical perspective to economic development research It starts with an overview of ICT4D Next it covers such frameworks and theories as neoclassical growth accounting and the theory of complementarity complex systems and chaos theories and the product life cycle PLC theory There are also nontechnical overviews of the DM and data analytic methods that can be used in this research Also presented is evidence that human capital and investment capital are complementary and are reliable sources of economic growth The book concludes with methodological frameworks to guide investment decisions and the formulation of strategic policy

the remarkable performance improvements driven by algorithmic technologies followed by examples of how interfaces and tools were provided to apply these solutions to real world challenges The subsequent Chapters 5 through 12 then focus on interdisciplinary discussions regarding how to formulate real societal issues into a catalog of problems to be addressed Finally Part III spanning Chapters 13 to 23 highlights selected topics on the innovative algorithmic foundations developed through the research project focusing on intriguing subjects and the latest ongoing research These include processing large scale discrete structures graph algorithms discrete optimization quantum algorithms and various other topics related to algorithmic foundations This book will serve as a valuable resource for readers interested in the use of algorithms in real life problems This book is based on the research project in Japan Algorithmic Foundations for Social Advancement
