Eadie, 2009-05-15 The discipline of communication has grown in popularity from the time professors of journalism and speech decided in the mid 1960s that the term communication was an excellent general descriptor for the theory and research that each group aspired to create Over time the two groups grew closer and recognized significant overlap in their theoretical and research interests but there were also differences in their traditions that kept them apart While both groups agreed that communication is a practical discipline journalism professors focused a great deal of their attention on the education of media professionals Speech professors on the other hand often were more oriented to the liberal arts and valued the fact that communication could be approached from a variety of traditions including the arts humanities social sciences and even the sciences A key term in 21st Century communication however is convergence Not only are media and technology converging with each other to produce new means of communicating but individuals are increasingly using both new and existing communication tools to create new forms of communication This convergence forces the various camps within the communication discipline to draw upon each other s theories and research methods to keep up with explaining the rapidly changing communication environment This convergence of ideas and theories provides a space to challenge conventional ways of thinking about the communication discipline and that s the goal of the SAGE 21st Century Reference Series volumes on Communication General Editor William F Eadie has sought to honor the diversity of the study of communication but also

The Therapist as Listener Peter Wilberg, 2004 Listening is clearly central to the practice of both counselling and psychotherapy Given this it is quite extraordinary how little thought has been given to the nature of therapeutic listening and to the cultivation and evaluation of the therapist as listener Instead listening is a subject marginalised in both the theoretical literature on psychotherapy and in the practical training of counsellors and psychotherapists In this collection of essays and articles by Peter Wilberg the thinking of Martin Heidegger provides the platform for an exploration of the deeper nature of listening not simply as a passive prelude to therapeutic or diagnostic responses but as a mode of active inner communication with others What Wilberg calls Maieutic Listening is not a new form of psychotherapy but the innately therapeutic essence of listening as
