

## **Thermoanalytical methods**

Thermal analysis is the term applied to a group of methods and techniques in which chemical or physical properties of a substance, a mixture of substances or reaction mixture are measured as function of temperature or time, while the substance are subjected to a controlled temperature program.

### **Thermoanalytical methods in pharmaceutical technology**

These methods are useful in:

- ✓ Prediction of drug-excipient compatibility,
- ✓ Studies of solid-dispersion systems,
- ✓ Analysis of enantiomers and racemates,
- ✓ Measurement of the time of tablet disintegration,
- ✓ Analysis of drug formulations and
- ✓ Studies of the processes of grinding and drying of drugs

### **Thermogravimetric analysis (TGA)**

Thermogravimetric analysis or thermal gravimetric analysis is a method of thermal analysis in which the mass of a sample is measured over time as the temperature changes. It is used to determine a material's thermal stability and its fraction of volatile components by monitoring the weight change that occurs as a sample is heated at a constant rate.

### **Derivative thermogravimetry (DTG)**

Derivative thermogravimetry (DTG) is a type of thermal analysis in which the rate of material weight changes upon heating is plotted against temperature and used to simplify reading the weight versus temperature thermogram peaks which occur close together.

**Thermoanalytical Methods of Investigation** Paul D. Garn, 1965 *Handbook of Thermal Analysis and Calorimetry*  
Michael E. Brown, Patrick K. Gallagher, 2003-12-08 This is the second volume of a four volume set intended to describe the techniques and applications of thermoanalytical and calorimetric methods The general techniques and methodology are covered extensively in Volume 1 along with the fundamental physicochemical background needed Consequently the subsequent volumes dwell on the applications of these powerful and versatile methods while assuming a familiarity with the techniques Volume 2 covers major areas of inorganic materials and some related general topics e g catalysis geochemistry and the preservation of art The chapters are written by established practitioners in the field with the intent of presenting a sampling of the how thermoanalytical and calorimetric methods have contributed to progress in their respective areas The chapters are not intended as exhaustive reviews of the topics but rather to illustrate to the readers what has been achieved and to encourage them to consider extending these applications further into their domains of interest Provides an appreciation for how thermal methods can be applied to inorganic materials and processes Provides an insight into the versatility of thermal methods Shares the experiences of experts in a variety of different fields A valuable reference source covering a huge area of materials coverage

Thermal Methods in Petroleum Analysis Heinz Kopsch, 2008-07-11 This exceptional book reveals the results of twelve years of extensive thermoanalytical investigations into petroleum and its products with the aid of 236 tables 284 diagrams and 159 references Firstly the methods employed in obtaining thermoanalytic data in particular thermogravimetry differential thermal analysis and differential scanning calorimetry are presented and the underpinning theory described Next the data obtained from model substances i e pure hydrocarbons is displayed it is then explained how multicomponent hydrocarbon systems may be characterized by comparison of their data with this Research into petroleum and its products using these methods is outlined The reactions central to various refinery processes tertiary oil recovery lubricant stability testing and oil shale retorting to name but a few examples are investigated as are relevant pyrolysis and oxidation reactions Finally readers are brought up to date with recent developments in instrumentation are recommended hardware and software and are provided with a list of suppliers Scientists engineers and technicians working on research product characterization process development or quality control in the oil recovery oil refining petrochemical lubricant and asphalt industries will find the advice and information in this book to be of great value

Drug-biomembrane interaction studies A. Fortunato, 2013-10-31 In DSC the heat flow in and out of a sample and a reference material is measured as a function of temperature as the sample is heated cooled or held isothermally at constant temperature The measurement signal is the energy absorbed or released by the sample in milliwatts DSC can detect endothermic and exothermic effects determine peak areas transition and reaction enthalpies determine temperatures that characterize a peak or other effects and measure specific heat capacity Since the end of the nineteenth century DSC has

been improved and optimized With the numerous technological innovations in both hardware and software it can explore new and demanding applications Different measurement principles sensors signal processing accessories and evaluation capabilities make differential scanning calorimetry one of the most common and versatile techniques in material characterization Today DSC benefits from technological solutions used previously for other applications MEMS technology optical devices and parameter estimation methods

**The Analysis of Thermally Stimulated Processes** R. Chen,Y. Kirsh,2013-10-22 Thermally stimulated processes include a number of phenomena either physical or chemical in nature in which a certain property of a substance is measured during controlled heating from a low temperature Workers and graduate students in a wide spectrum of fields require an introduction to methods of extracting information from such measurements This book gives an interdisciplinary approach to various methods which may be applied to analytical chemistry including radiation dosimetry and determination of archaeological and geological ages In addition recent advances are included such as ionic thermocurrent of general order kinetics polarization thermocurrents and some aspects of the superlinear dependence on the dose of thermoluminescence
