*Optical Code Division Multiple Access Communication Networks* Hongxi Yin, David J. Richardson, 2009-03-15 Optical code division multiple access OCDMA communication network technology will play an important role in future optical networks such as optical access and metropolitan area networks OCDMA technology can also be applied to implement optical signal multiplexing and label switching on backbone networks *Optical Code Division Multiple Access Communication Networks Theory and*

Applications introduces the code theory of OCDMA the methods and technologies of OCDMA encoding and decoding the theory and methods of analyzing OCDMA systems with various receiver models and realizing multiple class services with different bit rates and QoS In addition OCDMA network architectures protocols and applications are discussed in detail The up to date theoretical and experimental results on OCDMA systems and networks are also reported A large number of encoding decoding examples and many analysis and simulation results of code and system performances are given It is a valuable text and or reference book for postgraduates majoring in telecommunication and photonics to obtain a well knit theoretical foundation and for engineers in R D and management of optical communications Dr Yin is an Associate Professor of the School of Electronics Engineering and Computer Science at Peking University China and was a Visiting Research Fellow of Optoelectronics Research Centre ORC at University of Southampton UK Dr Richardson is a Professor for optical communications and Deputy Director of ORC at University of Southampton UK and is responsible for much of the ORC s fiber related activities

Optical Code Division Multiple Access Paul R. Prucnal, 2018-10-03 Code division multiple access CDMA technology has been widely adopted in cell phones Its astonishing success has led many to evaluate the promise of this technology for optical networks This field has come to be known as Optical CDMA OCDMA Surveying the field from its infancy to the current state Optical Code Division Multiple Access Fundamentals and Applications offers the first comprehensive treatment of OCDMA from technology to systems The book opens with a historical perspective demonstrating the growth and development of the technologies that would eventually evolve into today s optical networks Building on this background the discussion moves to coherent and incoherent optical CDMA coding techniques and performance analysis of these codes in fiber optic transmission systems Individual chapters provide detailed examinations of fiber Bragg grating FBG technology including theory design and applications coherent OCDMA systems and incoherent OCDMA systems Turning to implementation the book includes hybrid multiplexing techniques along with system examples and conversion techniques to connect networks that use different multiplexing platforms state of the art integration technologies OCDMA network security issues and OCDMA network architectures and applications including a look at possible future directions Featuring contributions from a team of international experts led by a pioneer in optical technology Optical Code Division Multiple Access Fundamentals and Applications places the concepts techniques and technologies in clear focus for anyone working to build next generation optical networks

Code Division Multiple Access Communications Savo G. Glisic, Pentti A. Leppänen, 2012-12-06 Code Division Multiple Access CDMA has become one of the main candidates for the next generation of mobile land and satellite communication systems CDMA is based on spread spectrum techniques which have been used in military applications for over half a century Only recently however has it been recognised that spread spectrum techniques combined with some additional steps can provide higher capacity and better flexibility for the mobile cellular radio communications Code Division Multiple Access Communications comprises a set of contributions from the most distinguished

world scientists in the field These papers review the basic theory and some of the most important problems related to spread spectrum and CDMA The topics covered centre on the information theory aspects of CDMA interference suppression and performance analysis The material presented in this book summarises the main problems in modern CDMA theory and practice and gives a solid starting point for studying this complex and still challenging field As such Code Division Multiple Access Communications is essential reading for all researchers and designers working in mobile communication systems and provides an excellent text for a course on the subject

Pupolin,1998-02-27 Broadband Wireless Access is a highly challenging and fast changing area of multimedia radio

communications These papers on the subject are the proceedings of the 9th Tyrrhenian Workshop held in Lerici Italy

September 1997 They provide a prospect on the state of the art and future development with a sufficiently wide focus to

cover technological architectural and regulatory issues Emphasis is given to those advances of digital signal processing

techniques microwave mono lithic integrated circuits and smart antennae that will allow the design of low cost user

terminals with advanced capabilities Specific attention is also devoted to the protocols these new terminals will use to access

the radio medium and to the kind of services that will eventually be provided to the end user in the future With contributions

from worldwide experts the material presented here is a timely and high level overview of the field and as well as being

informative is a useful tool for promoting further investigation into the area of multimedia radio communications 1999
