Power from the North Caroline Desbiens, 2013-05-03 In the 1970s Hydro-Québec declared in a publicity campaign "We Are Hydro-Québecois". The slogan symbolized the extent to which hydroelectric development in the North had come to both reflect and fuel French Canada's aspirations. The slogan helped Quebecers relate to the province's northern territory and to accept the exploitation of its resources. In *Power from the North* Caroline Desbiens explores how this culture of hydroelectricity helped shape the landscape during the first phase of the James Bay hydroelectric project. Policy makers and citizens did not see or argue with those who built the dams as mere workers; they saw them as pioneers in a previously uninhabited land now inscribed with the codes of culture and spectacle. This insightful work shows that if Québec hopes to engage in truly sustainable resource development, all actors must bring an awareness of their cultural histories and visions of nature, North and nation, to the negotiating table.

Electronic Energy Levels of Transition Metal Complexes Roman Boča, 2024-11-15 *Electronic Energy Levels of Transition Metal Complexes* guides the reader to understand how to comprehensively calculate, predict, and reconstruct electronic energy levels of separation between 0.1 to 30,000 cm⁻¹ in d¹ to d⁹ transition metal complexes. The applied apparatus helps to understand the individual effect of the interelectron repulsion, crystal field strength, spin-orbit coupling, and the magnetic field for any symmetry. Symmetry labels can be attached to energy levels (eigenvalues) by analyzing the eigenvectors of the model Hamiltonian, either at the level of crystal field terms or crystal field multiplets. This book includes basic formulae for matrix elements of the model Hamiltonian and a huge number of results presented as graphs, identifying the order of the energy levels and their labelling using the group double group irreducible representations. Utilization of the generated energy levels in electron spectroscopy, electron spin resonance, and magnetochemistry is presented. Massive modelling was done using desktop computers. Covers advanced methodology for general cases: electronic terms and spin-orbit multiplets in the crystal field of any symmetry and extensive modelling. Analyzes extensive modeling of energy levels and magnetic functions for complexes of lower symmetry. Presents energy level diagrams and magnetic functions for the most important cases, such as the octahedron, elongated tetragonal pyramid, compressed tetragonal pyramid, tetrahedron, prolate bisphenoid, flattened bisphenoid, trigonal bipyramid, tetragonal bipyramid, and orthorhombic bipyramid for d¹ to d⁹ systems.
