Supramole Poly:

Supramolecular Polymer Chemistry Akira Harada, 2012-01-10 Presenting the work of pioneering experts in this exciting field of supramolecular polymer chemistry this monograph covers an extensive range of applications including drug delivery and catalysis It focuses on new structures and phenomena of cyclodextrin based supramolecular polymers and many other compound classes While providing a deeper insight in macromolecular recognition and the mechanisms of living systems this book also introduces fascinating novel phenomena beyond natural systems

Supramolecular Polymer Networks and Gels Sebastian Seiffert, 2015-04-06 The series *Advances in Polymer Science* presents critical reviews of the present and future trends in polymer and biopolymer science It covers all areas of research in polymer and biopolymer science including chemistry physical chemistry physics material science The thematic volumes are addressed to scientists whether at universities or in industry who wish to keep abreast of the important advances in the covered topics *Advances in Polymer Science* enjoys a longstanding tradition and good reputation in its community Each volume is dedicated to a current topic and each review critically surveys one aspect of that topic to place it within the context of the volume The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically presenting selected examples explaining and illustrating the important principles and bringing together many important references of primary literature On that basis future research directions in the area can be discussed *Advances in Polymer Science* volumes thus are important references for every polymer scientist as well as for other scientists interested in polymer science as an introduction to a neighboring field or as a compilation of detailed information for the specialist Review articles for the individual volumes are invited by the volume editors Single contributions can be specially commissioned Readership Polymer scientists or scientists in related fields interested in polymer and biopolymer science at universities or in industry graduate students

Polymer Science: A Comprehensive Reference, 2012-12-05 The progress in polymer science is revealed in the chapters of *Polymer Science A Comprehensive Reference Ten Volume Set* In Volume 1 this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films Volume 2 addresses new characterization techniques such as high resolution optical microscopy scanning probe microscopy and other procedures for surface and interface characterization Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture the development of metallocene and post metallocene catalysis for olefin polymerization new ionic polymerization procedures and atom transfer radical polymerization nitroxide mediated polymerization and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click

procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects with a precision available only recently An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7 It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films inorganic organic hybrids or nanofibers Volume 8 expands these concepts focusing on applications in advanced technologies e g in electronic industry and centers on combination with top down approach and functional properties like conductivity Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9 It deals with various aspects of polymers in biology and medicine including the response of living cells and tissue to the contact with biofunctional particles and surfaces The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers They discuss new technologies needed for a sustainable economy in our world of limited resources Provides broad and in depth coverage of all aspects of polymer science from synthesis polymerization properties and characterization methods and techniques to nanostructures sustainability and energy and biomedical uses of polymers Provides a definitive source for those entering or researching in this area by integrating the multidisciplinary aspects of the science into one unique up to date reference work Electronic version has complete cross referencing and multi media components Volume editors are world experts in their field including a Nobel Prize winner

Comprehensive Supramolecular Chemistry II
George W. Gokel, Len Barbour, 2017-06-22

Comprehensive Supramolecular Chemistry II Second Edition Nine Volume Set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic inorganic and physical chemistry with some biological influence The original edition was structured to reflect in part the origin of the field However in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition experimental and computational methods in supramolecular chemistry supramolecular receptors dynamic supramolecular chemistry supramolecular engineering crystallographic engineered assemblies sensors imaging agents devices and the latest in nanotechnology Each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field Each article begins with outlining basic concepts before moving on to more advanced material Contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers Focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine nanotechnology and medicinal chemistry Fully rewritten to make a

completely up to date reference work that covers all the major advances that have taken place since the First Edition published in 1996

Supramolecular Polymers Alberto Ciferri, 2000-05-04 Focuses on detailed analysis of the formation and properties of linear planar and three dimensional polymer assemblies stabilized by supermolecular interactions includes examples of covalently bonded polymers exhibiting novel supra molecular effects Clarifies the theoretical basis for the self assembly of structures

Polymer Journal, 2006

Transition Metals in Supramolecular Chemistry Jean-Pierre Sauvage, 1999-06-02 Perspectives in Supramolecular Chemistry will relate recent developments and new exciting approaches in supramolecular chemistry In supramolecular chemistry our aim is to understand molecular chemistry beyond the covalent bond the series will concentrate on goal orientated supramolecular chemistry Perspectives in Supramolecular Chemistry will reflect research which develops supramolecular structures with specific new properties such as recognition transport and simulation of biosystems or new materials The series will cover all areas from theoretical and modelling aspects through organic and inorganic chemistry and biochemistry to materials solid state and polymer sciences reflecting the many and varied applications of supramolecular structures in modern chemistry

Transition Metals in Supramolecular Chemistry Edited by Jean Pierre Sauvage Universit Louis Pasteur Strasbourg France The chemistry of weak forces and non covalent interactions as pioneered by Pedersen Lehn and Cram is considered to be the origin of modern supramolecular chemistry 30 years ago transition metals and their complexes were not regarded as important to this science

Transition Metals in Supramolecular Chemistry clearly demonstrates that today transition metal complexes are routinely used to build large multicomponent architectures which display new and exciting applications including molecular switches liquid crystals and molecular magnets
