Surface Errors:

High Definition Metrology Based Surface Quality Control and Applications Shichang Du, Lifeng Xi, 2019-10-18

This book provides insights into surface quality control techniques and applications based on high definition metrology HDM. Intended as a reference resource for engineers who routinely use a variety of quality control methods and are interested in understanding the data processing from HDM data to final control actions, it can also be used as a textbook for advanced courses in engineering quality control applications for students who are already familiar with quality control methods and practices. It enables readers to not only assimilate the quality control methods involved but also to quickly implement the techniques in practical engineering problems. Further, it includes numerous case studies to highlight the implementation of the methods using measured HDM data of surface features. Since MATLAB is extensively employed in these case studies, familiarity with this software is helpful, as is a general understanding of surface quality control methods. *State-of-the-Art*

Laser Spectroscopy and its Applications : Volume II Yufei Ma, Qun Hao, Karol Krzempek, 2023-02-09 **Fundamentals of**

Aperture Antennas and Arrays Trevor S. Bird, 2015-11-02. This book is intended as an advanced text for courses in antennas with a focus on the mature but vital background field of aperture antennas. The book is aimed at final year MSc, PhD and Post Doctoral students as well as readers who are moving from academia into industry, beginning careers as wireless engineers, system designers in R D or for practising engineers. It assumes the reader has undertaken an earlier course of study on Maxwell's equations, fields and waves. Some of these topics are summarised in the early few chapters in order to provide continuity and background for the remaining chapters. The aperture antennas covered include the main types of horns, reflectors and arrays, as well as microstrip patches, reflectarrays and lenses. To provide more than a superficial treatment of arrays, the topic of mutual coupling is covered in greater detail than most similar books in the area. Also included is an introduction to arrays on non planar surfaces, which is of importance for applications that involve curved surfaces such as in aerodynamics or for making aperture antennas unobtrusive. A chapter is included on some modern aperture antennas to illustrate design techniques beyond the most common types of aperture antennas described in the early chapters. This is to show where advances have recently been made and where they could be improved in the future. Also included are selected topics of a practical nature for aperture antennas, namely fabrication and measurement. **Diamond Turn Machining** R.

Balasubramaniam, RamaGopal V. Sarepaka, Sathyan Subbiah, 2017-09-01. The goal of this book is to familiarize professionals, researchers and students with the basics of the Diamond Turn Machining Technology and the various issues involved. The book provides a comprehensive knowledge about various aspects of the technology, including the background, components of the machine, mechanism of material removal, application areas, relevant metrology and advances taking place in this domain. Solved and unsolved examples are provided in each of the areas, which will help the readers to practice and get familiarized with that particular area of the Diamond Turn Machining process.
