Statistical Modeling And Analysis For Complex Data Problems:

Statistical Modeling and Analysis for Complex Data Problems Pierre Duchesne, Bruno Rémillard, 2005-04-12 STATISTICAL MODELING AND ANALYSIS FOR COMPLEX DATA PROBLEMS treats some of today's more complex problems and it reflects some of the important research directions in the field. Twenty nine authors largely from Montreal's GERAD Multi University Research Center and who work in areas of theoretical statistics, applied statistics, probability theory and stochastic processes present survey chapters on various theoretical and applied problems of importance and interest to researchers and students across a number of academic domains. Some of the areas and topics examined in the volume are: an analysis of complex survey data, the 2000 American presidential election in Florida, data mining, estimation of uncertainty for machine learning algorithms, interacting stochastic processes, dependent data, copulas, Bayesian analysis of hazard rates, re-sampling methods in a periodic replacement problem, statistical testing in genetics and for dependent data, statistical analysis of time series, analysis, theoretical and applied stochastic processes and an efficient non-linear filtering algorithm for the position detection of multiple targets. The book examines the methods and problems from a modeling perspective and surveys the state of current research on each topic and provides direction for further research exploration of the area. Twenty nine authors largely from Montreal's GERAD Multi University Research Center and who work in areas of theoretical statistics, applied statistics, probability theory and stochastic processes present survey chapters on various theoretical and applied problems of importance and interest to researchers and students across a number of academic domains. **Advances in Complex Data Modeling and Computational Methods in Statistics** Anna Maria Paganoni, Piercesare Secchi, 2014-11-04 The book is addressed to statisticians working at the forefront of the statistical analysis of complex and high dimensional data and offers a wide variety of statistical models, computer intensive methods and applications: network inference from the analysis of high dimensional data, new developments for bootstrapping complex data, regression analysis for measuring the downside reputational risk, statistical methods for research on the human genome dynamics, inference in non euclidean settings and for shape data, Bayesian methods for reliability and the analysis of complex data, methodological issues in using administrative data for clinical and epidemiological research, regression models with differential regularization, geostatistical methods for mobility analysis through mobile phone data exploration. This volume is the result of a careful selection among the contributions presented at the conference S Co 2013 Complex data modeling and computationally intensive methods for estimation and prediction held at the Politecnico di Milano 2013. All the papers published here have been rigorously peer reviewed. *Complex Models and Computational Methods in Statistics* Matteo Grigoletto, Francesco Lisi, Sonia Petrone, 2013-01-26 The use of computational methods in statistics to face complex problems

and highly dimensional data as well as the widespread availability of computer technology is no news. The range of applications instead is unprecedented. As often occurs, new and complex data types require new strategies demanding for the development of novel statistical methods and suggesting stimulating mathematical problems. This book is addressed to researchers working at the forefront of the statistical analysis of complex systems and using computationally intensive statistical methods.

Analysis and Modeling of Complex Data in Behavioral and Social Sciences Donatella Vicari, Akinori Okada, Giancarlo Ragozini, Claus Weihs, 2014-07-05. This volume presents theoretical developments, applications and computational methods for the analysis and modeling in behavioral and social sciences where data are usually complex to explore and investigate. The challenging proposals provide a connection between statistical methodology and the social domain with particular attention to computational issues in order to effectively address complicated data analysis problems. The papers in this volume stem from contributions initially presented at the joint international meeting JCS CLADAG held in Anacapri, Italy, where the Japanese Classification Society and the Classification and Data Analysis Group of the Italian Statistical Society had a stimulating scientific discussion and exchange.
