Statistical Modelling In Glim:

Statistical Modelling in GLIM. Murray A. Aitkin, Dorothy Anderson, 1994 *Statistical Modelling in GLIM* Murray A. Aitkin, 1989 The analysis of data by statistical modelling is becoming increasingly important This book presents both the theory of statistical modelling with generalized linear models and the application of the theory to practical problems using the widely available package GLIM The authors have taken pains to integrate the theory with many practical examples which illustrate the value of interactive statistical modelling Throughout the book theoretical issues of formulating and simplifying models are discussed as are problems of validating the models by the detection of outliers and influential observations The book arises from short courses given at the University of Lancaster's Centre for Applied Statistics with an emphasis on practical programming in GLIM and numerous examples A wide range of case studies is provided using the normal binomial Poisson multinomial gamma exponential and Weibull distributions A feature of the book is a detailed discussion of survival analysis Statisticians working in a wide range of fields including biomedical and social sciences will find this book an invaluable desktop companion to aid their statistical modelling It will also provide a text for students meeting the ideas of statistical modelling for the first time Statistical Modelling in GLIM 4 Murray A. Aitkin, Brian Francis, John Hinde, 2005 This text examines the theory of statistical modelling with generalised linear models It also looks at applications of the theory to practical problems using the GLIM4 package Provided by publisher *Statistical Modelling in Glim*, 1992 **Advances in GLIM and Statistical Modelling** Ludwig Fahrmeir, Brian Francis, Robert Gilchrist, Gerhard Tutz, 2012-12-06 This volume presents the published Proceedings of the joint meeting of GUM92 and the 7th International Workshop on Statistical Modelling held in Munich Germany from 13 to 17 July 1992 The meeting aimed to bring together researchers interested in the development and applications of generalized linear modelling in GUM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops and GUM conferences Previous GUM conferences were held in London and Lancaster and a joint GUM Conference 4th Modelling Workshop was held in Trento The Proceedings of previous GUM conferences Statistical Modelling Workshops are available as numbers 14 32 and 57 of the Springer Verlag series of Lecture Notes in Statistics Workshops have been organized in Innsbruck Perugia Vienna Toulouse and Utrecht Proceedings of the Toulouse Workshop appear as numbers 3 and 4 of volume 13 of the journal Computational Statistics and Data Analysis Much statistical modelling is carried out using GUM as is apparent from many of the papers in these Proceedings Thus the Programme Committee were also keen on encouraging papers which addressed problems which are not only of practical importance but which are also relevant to GUM or other software development The Programme Committee requested both theoretical and applied papers Thus there are papers in a wide range of practical areas such as ecology breast cancer remission and diabetes mortality banking and insurance quality control social mobility organizational behaviour **Advances in Glim and Statistical Modelling** Ludwig Fahrmeir, Brian Francis, Robert Gilchrist, 1992-07-01

Statistical Modelling Adriano Decarli, 1989-01-01 The Analysis of Categorical Data Using GLIM James K. Lindsey, 2012-04-19 The present text is the result of teaching a third year statistical course to undergraduate social science students Besides their previous statistics courses these students have had an introductory course in computer programming FORTRAN Pascal or C and courses in calculus and linear algebra so that they may not be typical students of sociology This course on the analysis of contingency tables has been given with all students in front of computer terminals and more recently micro computers working interactively with GLIM Given the importance of the analysis of categorical data using log linear models within the overall body of models known as general linear models GLMs treated by GLIM this book should be of interest to anyone in any field concerned with such applications It should be suitable as a manual for applied statistics courses covering this subject I assume that the reader has already a reasonably strong foundation in statistics and specifically in dealing with the log linear logistic models I also assume that he or of GLIM itself In she has access to the GLIM manual and to an operational version other words this book does not pretend to present either a complete introduction to the use of GLIM or an exposition of the statistical properties of log linear logistic models For the former I would recommend Healy 1988 and Aitkin et al 1989 Por the latter many books already exist of which I would especially recommend that of Pingleton 1984 in the present context

Statistical Modelling Adriano Decarli, 1989-07-24 This volume constitutes the Proceedings of the joint meeting of GLIM89 and the 4th International Workshop on statistical Modelling held in Trento Italy from 17 to 21 July 1989 The meeting aimed to bring together researchers interested in the development and application of generalized linear modelling in GLIM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops held in Innsbruck perugia and Vienna and upon the two previous GLIM conferences GLIM82 and GLIM85 The Proceedings of the latter two being available as numbers 14 and 32 in the springer Verlag series of Lecture Notes in Statistics Much statistical modelling is carried out using GLIM as is apparent from many of the papers in these Proceedings however the Programme Committee were also keen on encouraging papers which discussed more general modelling techniques Thus about a third of the papers in this volume are outside the GLIM framework The Programme Committee specifically requested non theoretical papers in addition to considering theoretical contributions Thus there are papers in a wide range of practical areas such as radio spectral occupancy comparison of birthweights intervals between births accidents of railway workers genetics demography medical trials the social sciences and insurance A wide range of theoretical developments are discussed for example overdispersion non exponential family modelling novel approaches to analysing contingency tables random effects models Kalman Filtering model checking and extensions of Wedderburn s theoretical underpinning of GLMs

Introduction to Statistical Modelling and Inference Murray Aitkin, 2022-09-30 The complexity of large scale data sets Big Data has stimulated the development of advanced computational methods for analysing them There are two different kinds of methods to aid this The model based method uses probability models and

likelihood and Bayesian theory while the model free method does not require a probability model likelihood or Bayesian theory These two approaches are based on different philosophical principles of probability theory espoused by the famous statisticians Ronald Fisher and Jerzy Neyman Introduction to Statistical Modelling and Inference covers simple experimental and survey designs and probability models up to and including generalised linear regression models and some extensions of these including finite mixtures A wide range of examples from different application fields are also discussed and analysed No special software is used beyond that needed for maximum likelihood analysis of generalised linear models Students are expected to have a basic mathematical background in algebra coordinate geometry and calculus Features Probability models are developed from the shape of the sample empirical cumulative distribution function cdf or a transformation of it Bounds for the value of the population cumulative distribution function are obtained from the Beta distribution at each point of the empirical cdf Bayes s theorem is developed from the properties of the screening test for a rare condition The multinomial distribution provides an always true model for any randomly sampled data The model free bootstrap method for finding the precision of a sample estimate has a model based parallel the Bayesian bootstrap based on the always true multinomial distribution The Bayesian posterior distributions of model parameters can be obtained from the maximum likelihood analysis of the model This book is aimed at students in a wide range of disciplines including Data Science The book is based on the model based theory used widely by scientists in many fields and compares it in less detail with the model free theory popular in computer science machine learning and official survey analysis The development of the model based theory is accelerated by recent developments in Bayesian analysis

Handbook of Statistical Modeling for the Social and Behavioral Sciences G. Arminger, Clifford C. Clogg, M.E. Sobel, 2013-06-29 Contributors thoroughly survey the most important statistical models used in empirical reserch in the social and behavioral sciences Following a common format each chapter introduces a model illustrates the types of problems and data for which the model is best used provides numerous examples that draw upon familiar models or procedures and includes material on software that can be used to estimate the models studied This handbook will aid researchers methodologists graduate students and statisticians to understand and resolve common modeling problems

GLIM 82: Proceedings of the International Conference on Generalised Linear Models R. Gilchrist, 2012-12-06 This volume of Lecture Notes in Statistics consists of the published proceedings of the first international conference to be held on the topic of generalised linear models This conference was held from 13 15 September 1982 at the Polytechnic of North London and marked an important stage in the development and expansion of the GLIM system The range of the new system tentatively named Prism is here outlined by Bob Baker Further sections of the volume are devoted to more detailed descriptions of the new facilities including information on the two different numerical methods now available Most of the data analyses in this volume are carried out using the GLIM system but this is of course not necessary There are other ways of analysing generalised linear models and Peter Green here discusses the many attractive features of APL

including its ability to analyse generalised linear models Later sections of the volume cover other invited and contributed papers on the theory and application of generalised linear models Included amongst these is a paper by Murray Aitkin proposing a unified approach to statistical modelling through direct likelihood inference and a paper by Daryl Pregibon showing how GLIM can be programmed to carry out score tests A paper by Joe Whittaker extends the recent discussion of the relationship between conditional independence and log linear models and John Hinde considers the introduction of an independent random variable into a linear model to allow for unexplained variation in Poisson data Glim M. J. R. Healy,1989 **The GLIM System** Brian Francis,Dr. Mick Green,Clive Payne,1993 This manual describes how GLIM 4 may be used for statistical analysis in its most general sense including data manipulation and display model fitting and prediction This is a thorough re working of the previous GLIM manual to take account of updates to the software essential reading for all research statisticians everywhere *Applying Generalized Linear Models* James K. Lindsey,2008-01-15 *Applying Generalized Linear Models* describes how generalized linear modelling procedures can be used for statistical modelling in many different fields without becoming lost in problems of statistical inference Many students even in relatively advanced statistics courses do not have an overview whereby they can see that the three areas linear normal categorical and survival models have much in common The author shows the unity of many of the commonly used models and provides the reader with a taste of many different areas such as survival models time series and spatial analysis This book should appeal to applied statisticians and to scientists with a basic grounding in modern statistics With the many exercises included at the ends of chapters it will be an excellent text for teaching the fundamental uses of statistical modelling The reader is assumed to have knowledge of basic statistical principles whether from a Bayesian frequentist or direct likelihood point of view and should be familiar at least with the analysis of the simpler normal linear models regression and ANOVA The author is professor in the biostatistics department at Limburgs University Diepenbeek in the social science department at the University of Li ge and in medical statistics at DeMontfort University Leicester He is the author of nine other books Glim M. J. R. Healy,1988 A practical guide to GLIM a computer package designed to calculate statistical data using linear modelling by least squares Little previous statistical knowledge is assumed illustrative examples are included **Nature Conservation** C Margules,M Austin,1990-01-01 The proceedings of a Cost Effective Biological Surveys and Data Analysis workshop held at the old Quarantine Station North Head Sydney in March 1988 under the auspices of the Council of Nature Conservation Ministers CONCOM and the Australian Environment Council AEC *COMPSTAT* David Edwards,Niels E. Raun,2012-12-06 The papers assembled in this volume were presented at COMPSTAT 1988 the 8th biannual Symposium in Computational Statistics held under the auspices of the International Association for Statistical Computing The current impact of computers on the theory and practice of statistics can be traced at many levels on one level the ubiquitous personal computer has made methods for explorative data analysis and display rarely even described in conventional statistics

textbooks widely available At another level advances in computing power permit the development and application of statistical methods in ways that previously have been infeasible Some of these methods for example Bayesian methods are deeply rooted in the philosophical basis of statistics while others for example dynamic graphics present the classical statistical framework with quite novel perspectives The contents of this volume provide a cross section of current concerns and interests in computational statistics A dominating topic is the application of artificial intelligence to statistics and vice versa where systems deserving the label expert systems are just beginning to emerge from the haze of good intentions with which they hitherto have been clouded Other topics that are well represented include nonparametric estimation graphical techniques algorithmic developments in all areas projection pursuit and other computationally intensive methods COMPSTAT symposia have been held biannually since 1974 This tradition has made COMPSTAT a major forum for advances in computational statistics with contributions from many countries in the world Two new features have been introduced at COMPSTAT 88

Journal of the American Statistical Association, 2006 A scientific and educational journal not only for professional statisticians but also for economists business executives research directors government officials university professors and others who are seriously interested in the application of statistical methods to practical problems in the development of more useful methods and in the improvement of basic statistical data

Statistical Modelling Peter G. M. Heijden, 1992 The wide selection of articles in this volume reflects the large variety of problems that are likely to confront an applied statistician These range from methodological topics such as issues in probability theory and statistical inference computational statistics and software considerations to topics arising from particular applications such as data analyses in medicine and epidemiology sociology demography economics and so on Particular emphasis is given to the analysis of categorical data and educational testing applications
