Structural Timber Design:

Structural Timber Design, EBundle Werner Seim, 2024-03-06 Timber construction has been one of the most innovative areas of the building industry for several years. The speed with which new products are introduced into practical application is almost breathtaking compared to the other construction materials in the building industry. As a result, timber construction is continuously increasing its market share in commercial buildings and hall structures and even in multi-storey construction for residential and office buildings. This book provides essential knowledge and skills required for the design, detailing and construction of timber structures for typical building structures. Special emphasis is placed on the specific features of timber and wood-based materials compared to other construction materials. This concerns the numerous advantages, such as e.g. the comparatively low weight, the good workability of the high performance material and the large variety of assembling technologies, but also the challenges resulting from the material anisotropy and from the susceptibility to natural pests. In each chapter, the essential phenomena are explained first and then brought into connection with code regulations. This aims to support the basic understanding of the interrelations and dependencies in timber engineering, which is the fundamental basis of creative engineering. Package: Print Book, ePDF. Structural Timber Design to Eurocode 5 Jack Porteous, Abdy Kermani, 2013-04-16 Structural Timber Design to Eurocode 5 provides practising engineers and specialist contractors with comprehensive detailed information and in-depth guidance on the design of timber structures based on the common rules and rules for buildings in Eurocode 5 Part 1-1. It will also be of interest to undergraduate and postgraduate students of civil and structural engineering. It provides a step-by-step approach to the design of all of the commonly used timber elements and connections using solid timber, glued laminated timber or wood-based structural products and incorporates the requirements of the UK National Annex. It covers strength and stiffness properties of timber and its reconstituted and engineered products, key requirements of Eurocode 5, Eurocode 1 and Eurocode 5 Part 1-1 design of beams and columns of solid timber, glued laminated composite and thin webbed sections, lateral stability requirements of timber structures, design of mechanical connections subjected to lateral and/or axial forces, design of moment-resisting rigid and semi-rigid connections, racking design of multi-storey platform framed walls. Featuring numerous detailed worked examples, the second edition has been thoroughly updated and includes information on the consequences of amendments and revisions to EC5 published since the first edition and the significant additional requirements of BSI non-contradictory complementary information document PD 6693-1-1 relating to EC5. The new edition also includes a new section on axial stress conditions in composite sections covering combined axial and bending stress conditions and reference to the major revisions to the design procedure for glued laminated timber.
