*Video Registration* Mubarak Shah, Rakesh Kumar, 2013-11-11 Traditionally scientific fields have defined boundaries and scientists work on research problems within those boundaries. However, from time to time those boundaries get shifted or blurred to evolve new fields. For instance, the original goal of computer vision was to understand a single image of a scene by identifying objects, their structure, and spatial arrangements. This has been referred to as image understanding. Recently, computer vision has gradually been making the transition away from understanding single images to analyzing image sequences or video understanding. Video understanding deals with understanding of video sequences, e.g., recognition of gestures, activities, facial expressions, etc. The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion-based recognition of actions and events. Video understanding has overlapping research problems with other fields, therefore blurring the fixed boundaries. Computer graphics, image processing, and video databases have obvious overlap with computer vision. The main goal of computer graphics is to generate and animate realistic-looking images and videos. Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery. A good example of this is image-based rendering and modeling techniques in which geometry, appearance, and lighting is derived from real images using computer vision techniques. Here, the shift is from synthesis to analysis, followed by synthesis. *Federal Register*, 2013-07 [Computer Vision - ECCV 2008](#) David Forsyth, Philip Torr, Andrew Zisserman, 2008-10-07 The four-volume set comprising LNCS volumes 5302, 5303, 5304, 5305 constitutes the refereed proceedings of the 10th European Conference on Computer Vision (ECCV 2008) held in Marseille, France, in October 2008. The 243 revised papers presented were carefully reviewed and selected from a total of 871 papers submitted. The four books cover the entire range of current issues in computer vision. The papers are organized in topical sections on recognition, stereo, people and face recognition, object tracking, matching, learning, and features, MRFs, segmentation, computational photography, and active reconstruction. **Computer-Assisted Neurosurgery** Norihiko Tamaki, Kazumasa Ehara, 2012-12-06 Computer technology has developed remarkably in the field of neurosurgery during the past 10 to 20 years. Great achievements have been made recently in neuroimaging techniques and computer technology for neuronavigation from frameless armless systems to robotic microscopes. Contained in the present volume are all the papers presented at the International Symposium on Computer Assisted Neurosurgery and selected papers presented at the 6th Annual Meeting of the Japanese Society of Computers in Neurosurgery which were held in Kobe, Japan, on January 24-26, 1997. This volume is a comprehensive description and review of current technical advancements in computer-assisted neurosurgery with a special focus on advanced intraoperative neuroimaging, various neuronavigation systems, robotic microscopes, and strategies for preoperative and intraoperative surgical planning using high-power workstations with three-dimensional software. We express our thanks to the contributors for their participation and cooperation and to Springer Verlag for personal and

technical assistance in publishing this work We sincerely hope that this volume will contribute to improving neurosurgical technology and outcomes
