String Rewriting Systems

* **String rewriting systems** are usually specified by:
  * Some rewriting mechanism,
  * Some base of simple (accepted) words.
* Let us introduce **two special symbols** that do not belong to our alphabet Σ:
  * ¢ left sentinel,
  * $ right sentinel.

String Rewriting Systems:

String-Rewriting Systems Ronald V. Book,Friedrich Otto,2012-12-06 The subject of this book is string rewriting systems It is generally accepted that string rewriting was first introduced by Axel Thue in the early part of this century In the 1960 s and early 1970 s it received renewed attention due to interest in formal language theory In the 1980 s and 1990 s it has received more interest since it can be viewed as a special case of term rewriting a subject that has become important in the study of automated deduction Today string rewriting is studied by researchers in theoretical computer science and also by researchers interested in the foundations of artificial intelligence A sketch of the way that the subject has developed is contained in Chapter 0 and the reader is advised to begin with that chapter Both authors have been active in the field and have lectured on the subject in several universities Lecture notes have been produced and dis tributed This monograph is a result of revising and rewriting those notes It represents an attempt by the authors to present the concepts that the authors consider to be most fundamental and to gather together the most useful results in such a way that they can be understood and used in studies relating to more general rewriting to automated deduction and to algo rithmic problems of algebraic structures This monograph is written for independent study by researchers in the oretical computer science or in the foundations of artificial intelligence *String-Rewriting Systems* Ronald V Book,Friedrich Otto,1998-02-18 **Confluent String Rewriting** Matthias Jantzen,2012-12-06 Replacement systems such as term rewriting systems tree manipulat ing systems and graph grammars have been used in Computer Science in the context of theorem proving program optimization abstract data types algebraic simplification and symbolic comput ation Replacement systems for strings arose about seventy years earlier in the area of combinatory logic and group theory The most natural and appropriate formalism for dealing with string rewriting is the notion of a semi Thue system and this monograph treats its central aspects The reduction relation is here defined firstly by the direction of the rules and secondly by some metric that yields efficient algorithms These systems are general enough to discuss the basic notions of arbitrary replacement systems such as termination confluence and the Church Rosser property in its original meaning Confluent semi Thue systems in which each and every derivation consists of finitely many steps only are called complete they guarantee the existence of unique normal forms as canonical representatives of the Thue congruence classes Each such system can be considered a nondeterministic algorithm for the word problem which works correctly without backtracking This is often conceptually simpler and more elegant than an ad hoc construction In many cases a replace ment system can be altered to a complete system by the Knuth Bendix completion method Term Rewriting Systems Terese,2003-03-20 Term rewriting systems developed out of mathematical logic and are an important part of theoretical computer science They consist of sequences of discrete transformation steps where one term is replaced with another and have applications in many areas from functional programming to automatic theorem proving and computer algebra This 2003 book starts at an elementary level with the earlier chapters providing a foundation for the

rest of the work Much of the advanced material appeared here for the first time in book form Subjects treated include orthogonality termination completion lambda calculus higher order rewriting infinitary rewriting and term graph rewriting Many exercises are included with selected solutions provided on the web A comprehensive bibliography makes this book ideal both for teaching and research A chapter is included presenting applications of term rewriting systems with many pointers to actual implementations   Match-Bounded String Rewriting Systems National Aeronautics and Space Administration (NASA),2018-06-21 We introduce a new class of automated proof methods for the termination of rewriting systems on strings The basis of all these methods is to show that rewriting preserves regular languages To this end letters are annotated with natural numbers called match heights If the minimal height of all positions in a redex is h 1 then every position in the reduct will get height h 1 In a match bounded system match heights are globally bounded Using recent results on deleting systems we prove that rewriting by a match bounded system preserves regular languages Hence it is decidable whether a given rewriting system has a given match bound We also provide a sufficient criterion for the abence of a match bound The problem of existence of a match bound is still open Match boundedness for all strings can be used as an automated criterion for termination for match bounded systems are terminating This criterion can be strengthened by requiring match boundedness only for a restricted set of strings for instance the set of right hand sides of forward closures Geser Alfons and Hofbauer Dieter and Waldmann Johannes Langley Research Center NASA CR 2003 212685 NIA 2003 09   Decision Problems for String Rewriting Systems Robert Cremanns,1997   **On LM-systems and Forward Closed String Rewriting Systems** Daniel S. Hono (II),2018   Match-Bounded String Rewriting Systems Alfons Geser,Nasa Technical Reports Server (Ntrs),Et Al,2013-07 We introduce a new class of automated proof methods for the termination of rewriting systems on strings The basis of all these methods is to show that rewriting preserves regular languages To this end letters are annotated with natural numbers called match heights If the minimal height of all positions in a redex is h 1 then every position in the reduct will get height h 1 In a match bounded system match heights are globally bounded Using recent results on deleting systems we prove that rewriting by a match bounded system preserves regular languages Hence it is decidable whether a given rewriting system has a given match bound We also provide a sufficient criterion for the abence of a match bound The problem of existence of a match bound is still open Match boundedness for all strings can be used as an automated criterion for termination for match bounded systems are terminating This criterion can be strengthened by requiring match boundedness only for a restricted set of strings for instance the set of right hand sides of forward closures   Sequentially-closed and Forward-closed String Rewriting Systems Yu Zhang (Ph. D. in computer science),2020   **Termination Proofs for String Rewriting Systems Via Inverse Match-Bounds** National Aeronautics and Space Administration (NASA),2018-06-21 Annotating a letter by a number one can record information about its history during a reduction A string rewriting system is called match bounded if there is a global upper bound to these numbers In earlier

papers we established match boundedness as a strong sufficient criterion for both termination and preservation of regular languages We show now that the string rewriting system whose inverse left and right hand sides exchanged is match bounded also have exceptional properties but slightly different ones Inverse match bounded systems effectively preserve context free languages their sets of normalized strings and their sets of immortal strings are effectively regular These sets of strings can be used to decide the normalization the termination and the uniform termination problems of inverse match bounded systems We also show that the termination problem is decidable in linear time and that a certain strong reachability problem is deciable thus solving two open problems of McNaughton s Butler Ricky Technical Monitor and Geser Alfons and Hofbauer Dieter and Waldmann Johannes Langley Research Center NASA CR 2004 213032 NIA 2004 02 **Algebraic Engineering - Proceedings Of The First International Conference On Semigroups And Algebraic Eng And Workshop On For** Chrystopher L Nehaniv,Masami Ito,1999-05-14 There is algebraic structure in time computation and biological systems Algebraic engineering exploits this structure to achieve better understanding and design In this book pure and applied results in semigroups language theory and algebra are applied to areas ranging from circuit design to software engineering to biological evolution **Advances in Algorithms, Languages, and Complexity** Ding-Zhu Du,Ker-I Ko,Ronald V. Book,1997-02-28 This book contains a collection of sixteen survey papers on recent developments in algorithms formal languages and computational complexity These are the three areas in which Professor Ronald V Book has made significant contributions and the objective of the editors and the contributors is to honor Professor Book on his sixtieth birthday Audience Researchers and graduate students with interests in design and analysis of algorithms in language theory and in computational complexity String Rewriting Systems and Associated Finiteness Conditions S.
