## Structure Of Space:

**The Large Scale Structure of Space-time** Stephen Hawking, George Francis Rayner Ellis, 1973 Einstein's General Theory of Relativity leads to two remarkable predictions first that the ultimate destiny of many massive stars is to undergo gravitational collapse and to disappear from view leaving behind a black hole in space and secondly that there will exist singularities in space time itself These singularities are places where space time begins or ends and the presently known laws of physics break down They will occur inside black holes and in the past are what might be construed as the beginning of the universe To show how these predictions arise the authors discuss the General Theory of Relativity in the large Starting with a precise formulation of the theory and an account of the necessary background of differential geometry the significance of space time curvature is discussed and the global properties of a number of exact solutions of Einstein's field equations are examined The theory of the causal structure of a general space time is developed and is used to study black holes and to prove a number of theorems establishing the inevitability of singularities under certain conditions A discussion of the Cauchy problem for General Relativity is also included in this 1973 book

The Large Scale Structure of Space-Time Stephen W. Hawking, G. F. R. Ellis, 1973 This 1973 book discusses Einstein's General Theory of Relativity and its predictions concerning black holes and singularities in space time itself

Social Structure, Space and Possession in Tongan Culture and Language Svenja Völkel, 2010 This interdisciplinary study investigates the relationship between culture language and cognition based on the aspects of social structure space and possession in Tonga Polynesia Grounded on extensive field research Volkel explores the subject from an anthropological as well as from a linguistic perspective The book provides new insights into the language of respect an honorific system which is deeply anchored in the societal hierarchy spatial descriptions that are determined by socio cultural and geocentric parameters kinship terminology and possessive categories that perfectly express the system of social status inequalities among relatives These examples impressively show that language is deeply anchored in its cultural context Moreover the linguistic structures reflect the underlying cognitive frame of its speakers Just as several cultural practices sitting order access to land and gift exchange processes the linguistic means are not only expressions of stratified social networks but also tools to maintain or negotiate the underlying socio cultural system

**Structure of Space and the Submicroscopic Deterministic Concept of Physics** Volodymyr Krasnoholovets, 2017-07-06 This book Structure of Space and the Submicroscopic Deterministic Concept of Physics completely formalizes fundamental physics by showing that all space which consists of objects and distances arises from the same origin manifold of sets A continuously organized mathematical lattice of topological balls represents the primary substrate named the tessellattice All fundamental particles arise as local fractal deformations of the tessellattice The motion of such particulate balls through the tessellattice causes it to deform neighboring cells which generates a cloud of a new kind of spatial excitations named inertons Thus so called

hidden variables introduced in the past by de Broglie Bohm and Vigier have acquired a sense of real quasiparticles of space This theory of space unambiguously answers such challenging issues as what is mass what is charge what is a photon what is the wave psi function what is a neutrino what are the nuclear forces and so on The submicroscopic concept uncovers new peculiar properties of quantum systems especially the dynamics of particles within a section equal to the particle s de Broglie wavelength which are fundamentally impossible for quantum mechanics This concept thoroughly discussed in the book allows one to study complex problems in quantum optics and quantum electrodynamics in detail to disclose an inner world of particle physics by exposing the structure of quarks and nucleons in real space and to derive gravity as the transfer of local deformations of space by inertons which in turn completely solves the problems of dark matter and dark energy Inertons have revealed themselves in a number of experiments carried out in condensed media plasma nuclear physics and astrophysics which are described in this book together with prospects for future studies in both fundamental and applied physics
