Systemics Of Emergence:

Systemics of Emergence Gianfranco Minati, Eliano Pessa, Mario Abram, 2006-01-16 Systemics of Emergence Research and Development is a volume devoted to exploring the core theoretical and disciplinary research problems of emergence processes from which systems are established. It focuses on emergence as the key point of any systemic process. This topic is dealt with within different disciplinary approaches indicated by the organization in sections 1 Applications 2 Biology and human care 3 Cognitive Science 4 Emergence 5 General Systems 6 Learning 7 Management 8 Social Systems 9 Systemic Approach and Information Science 10 Theoretical issues in Systemics. The Editors and contributing authors have produced this volume to help encourage and widen the work in this area of General Systems Research. **Towards a**

Post-Bertalanffy Systemics Gianfranco Minati, Mario Abram, Eliano Pessa, 2015-12-23 This book contains the proceedings of the Sixth National Conference of the Italian Systems Society. The title Towards a post Bertalanffy Systemics aims to underline the need for Systemics and Systems Science to generalize theoretically concepts related to complexity, the great enemy of Bertalanffy Systemics. Hopefully this goal should be achieved by working in an inter disciplinary and trans disciplinary fashion using systemic concepts arising from various disciplines and from the original or Bertalanffy Systemics as well. The interdisciplinary nature of the original Systemics and its power of generalization were given overall by the fact that the problems and solutions of one discipline become problems and solutions for another. Today the modeling and interpretation of multidisciplinary approaches and representations makes easier to recognize these interconnections. The context however has changed dramatically. Of course the challenge is still to find theoretical generalizations and applications even where we have a lot of specificities but we know very little on how to combine them. We cannot however simply replace the old with the new but we must introduce strategies to recognize, represent, model and act on new levels combining multiple representations, functions and emergence. In many disciplines this has been already done and inevitably well since targets and projects are well specified and oriented. The challenge is to do it for Systemics with the vocations of cultural and theoretical generalization. Examples of new issues introduced by such theoretical disciplinary improvements dealt with by many disciplines include the study of mesoscopic or middle way level of multiple and dynamic coherence of equivalence, non equivalence of fractality of networks of non causality of non invasiveness of non prescribability of non separability of quasi properties of symmetry properties of topological dynamics as well as of quantum theories and concepts. The conference was devoted to identifying, discussing and understanding possible interrelationships of theoretical disciplinary improvements recognized as having prospective fundamental roles for a new post Bertalanffy Systemics. The latter should be able to deal with problems related to complexity in a generalized way. In this context the inter disciplinaryity should consist for instance in a disciplinary reformulation of problems as from algebraic to geometrical from military to political from biological to chemical while the trans disciplinaryity should be related to the study of such reformulations and their properties. The Italian

Systems Science Yi Lin, Xiaojun Duan, Chengli Zhao, Li Da Xu, 2012-11-26 By making use of the principles of systems science the scientific community can explain many complicated matters of the world and shed new light on unsettled problems Each real science has its own particular methodology for not only qualitative but also quantitative analyses so it is important to understand the organic whole of systems research

Emergence in Complex, Cognitive, Social, and Biological Systems Gianfranco Minati, Eliano Pessa, 2012-12-06 The systems movement is made up of many systems societies as well as of disciplinary researchers and researches explicitly or implicitly focusing on the subject of systemics officially introduced in the scientific community fifty years ago Many researches in different fields have been and continue to be sources of new ideas and challenges for the systems community To this regard a very important topic is the one of EMERGENCE Between the goals for the actual and future systems scientists there is certainly the definition of a general theory of emergence and the building of a general model of it The Italian Systems Society Associazione Italiana per la Ricerca sui Sistemi AIRS decided to devote its Second National Conference to this subject Because AIRS is organized under the form of a network of researchers institutions scholars professionals and teachers its research activity has an impact at different levels and in different ways Thus the topic of emergence was not only the focus of this conference but it is actually the main subject of many AIRS activities

Multiple Systems Gianfranco Minati, Maria Pietronilla Penna, 2024-01-04 This book presents the proceedings of the Eighth National Conference of the Italian Systems Society The contributions underline the need for Systemics and Systems Science in order to address multiple changing systems involving several coherent versions The conference focused on identifying discussing and understanding possible interrelationships between fundamental theoretical advances in different disciplines Given their scope these proceedings represent a valuable asset for
