

Do you have persistent pain?

HAVE YOU HAD PAIN THAT...

- Lasts beyond normal healing?
- Feels like it spreads, moves around, gets bigger?
- Increases with stress or decreases when you are having fun?
- Affects your ability to sleep?

DO YOU FIND THAT...

- Tests don't explain your symptoms?
- Medication doesn't completely control your pain?
- People don't think your pain is real?

Some things make pain worse

For many years, we misunderstood pain. We now understand that pain is actually produced in the brain using information from your body.

With persistent pain, your brain forms more and more pathways over time that can create pain.

We say that nerves that fire together, wire together.

Some things make pain better

We now know that the brain can change.

We can rewire these pathways and change our pain.

Understanding Pain Naheed Ali, Moshe Lewis, 2015-04-01 Pain is informally defined as the body's way of uncovering a problem Whether due to an injury infection or something else pain alerts a person that something is not right Sometimes pain goes along with inflammation and swelling and when it does the problem is more evident Oftentimes pain is more generalized to the entire body signaling a viral infection such as a flu virus Still other times there is no apparent root cause for a person's pain Yet millions of people suffer from some form of pain on a daily basis Understanding Pain walks readers through the various types of pain the causes and symptoms as well as the methods of treatment currently available From prescription medication to acupuncture and massage therapy various approaches may work for some but not for others But handling pain is essential for living well and functioning on a daily basis Here the authors provide a comprehensive introduction to the subject covering self care as well as caring for others in pain and addressing alternative as well as traditional methods of pain management

Understanding Pain Fernando Cervero, 2014-02-14 An expert explores the nature of pain why it hurts and why some pain is good and some pain is bad If you touch something hot it hurts You snatch your hand away from the hot thing immediately Obviously But what is really happening biologically and emotionally In Understanding Pain Fernando Cervero explores the mechanisms and the meaning of pain You touch something hot and your brain triggers a reflex action that causes you to withdraw your hand protecting you from injury That kind of pain Cervero explains is actually good for us it acts as an alarm that warns us of danger and keeps us away from harm But Cervero tells us not all pain is good for you There is another kind of pain that is more like a curse chronic pain that is not related to injury This is the kind of pain that fills pain clinics and makes life miserable Cervero describes current research into the mysteries of chronic pain and efforts to develop more effective treatments Cervero reminds us that pain is the most common reason for people to seek medical attention but that it remains a biological enigma It is protective but not always Its effects are not only sensory but also emotional There is no way to measure it objectively no test that comes back positive for pain the only way a medical professional can gauge pain is by listening to the patient's description of it The idea of pain as a test of character or a punishment to be borne is changing prevention and treatment of pain are increasingly important to researchers clinicians
