Wright Space:

The Wright Space Grant Hildebrand, 1991 **The Wright Space** Spencer Hart, 2001 This richly illustrated volume of designs by the visionary American architect Frank Lloyd Wright 1867-1959 focuses on his unique ability to integrate structure and settings in ways that responded to the client's needs, the nature of the site, and the social changes that evolved over his seventy-year career. His respect for natural materials and his willingness to experiment with machine-age technology resulted in rare essays in wood, stone, brick, patterned and poured concrete, glass, and other elements combined in harmonious ways to express his elusive ideal: an organic architecture of free-flowing spaces dedicated to common and private use in ways that enhanced individual dignity and harmonious relationships.

The Space Within Robert McCarter, 2016-11-15 Alvar Aalto once argued that what mattered in architecture wasn't what a building looks like on the day it opens but what it is like to live inside it thirty years later. In this book, architect and critic Robert McCarter persuasively argues that interior spatial experience is the necessary starting point for design, and the quality of that experience is the only appropriate means of evaluating a work after it has been built. McCarter reveals that we can't really know a piece of architecture without inhabiting its spaces, and we need to counter our contemporary obsession with exterior views and forms with a renewed appreciation for interiors. He explores how interior space has been integral to the development of modern architecture from the late 1800s to today, and he examines how architects have engaged interior space and its experiences in their design processes, fundamentally transforming traditional approaches to composition. Eloquently placing us within a host of interior spaces, he opens up new ways of thinking about architecture and what its goals are and should be.

Frank Lloyd Wright's Living Space Gail Satler, 2000-04 This sociological analysis of Wright's architecture examines the interaction between people and the spaces they create. Satler shows how Wright explored a new architectural dimension: the space in which we live. Focusing on the Larkin Building (1904) and Unity Temple (1907), works that Wright considered important but that have received little attention, Satler delineates the social nature of space. She provides an analytic framework through which to understand Wright's buildings and his writings, revealing how the history of such works and cultural landscapes offer a basis for making social, political, and spatial choices about the future. Wright's specific architectural works provide a framework for constructing social histories of places and people because his designs represent a natural way to build and to live within a larger social landscape. This original study will appeal to sociologists, architects, urban and architectural historians, urban planners, and anthropologists, and those interested in the work of Frank Lloyd Wright.

Practice Stan Allen, 2012-12-06 Conversant in contemporary theory and architectural history, Stan Allen argues that concepts in architecture are not imported from other disciplines but emerge through the materials and procedures of architectural practice itself. Drawing on his own experience as a working architect, he examines the ways in which the tools available to the architect affect the design and production of buildings. This second edition includes revised essays together with previously unpublished work. Allen's

seminal piece on Field Conditions is included in this reworked revised and redesigned volume A compelling read for student and practitioner alike

Wrightscapes Charles E. Aguar, Berdeana Aguar, 2002 Shedding light on a fascinating yet previously unexamined topic Wrightscapes analyzes 85 of Frank Lloyd Wright's designs paying particular attention to site planning landscape design community scale and regional planning The authors include many original diagrams rare archival material and some 200 photographs and site plans many never published before detailing Wright's residential and public work and his urban design initiatives

Macroevolution Emanuele Serrelli, Nathalie Gontier, 2015-02-13 This book is divided in two parts the first of which shows how beyond paleontology and systematics macroevolutionary theories apply key insights from ecology and biogeography developmental biology biophysics molecular phylogenetics and even the sociocultural sciences to explain evolution in deep time In the second part the phenomenon of macroevolution is examined with the help of real life history case studies on the evolution of eukaryotic sex the formation of anatomical form and body plans extinction and speciation events of marine invertebrates hominin evolution and species conservation ethics The book brings together leading experts who explain pivotal concepts such as Punctuated Equilibria Stasis Developmental Constraints Adaptive Radiations Habitat Tracking Turnovers Mass Extinctions Species Sorting Major Transitions Trends and Hierarchies key premises that allow macroevolutionary epistemic frameworks to transcend microevolutionary theories that focus on genetic variation selection migration and fitness Along the way the contributing authors review ongoing debates and current scientific challenges detail new and fascinating scientific tools and techniques that allow us to cross the classic borders between disciplines demonstrate how their theories make it possible to extend the Modern Synthesis present guidelines on how the macroevolutionary field could be further developed and provide a rich view of just how it was that life evolved across time and space In short this book is a must read for active scholars and because the technical aspects are fully explained it is also accessible for non specialists Understanding evolution requires a solid grasp of above population phenomena Species are real biological individuals and abiotic factors impact the future course of evolution Beyond observation when the explanation of macroevolution is the goal we need both evidence and theory that enable us to explain and interpret how life evolves at the grand scale
