Norris, Vladimir Hachinski, 2001-04-12 The treatment of stroke remains ineffective

and prevention is the key issue for this common disease Norris and Hachinski have recruited an international group of experts to provide a comprehensive critical review of the evidence on the primary and secondary prevention of cerebrovascular disease and to translate this information into clinical practice The authors present fresh information on established risk factors such as atrial fibrillation smoking and hypertension and on new risk factors such as homocysteinemia and the paradoxical role of alcohol They cover the protective effects of lifestyle changes diet exercise and estrogen Under secondary prevention they deal with aspirin antiplatelet therapy surgical measures to prevent stroke angioplasty and stenting and the importance of cardiac anomalies increasingly revealed by high definition imaging While endarterectomy remains controversial for asymptomatic carotid stenosis it has been clearly defined as the single most effective strategy in secondary prevention In a concluding section that will be particularly valuable to clinical readers the authors provide a lucid balanced discussion of how the findings from clinical trials where patients are highly selected closely monitored and given the highest standard of care can be effectively applied in the everyday practice of medicine

Handbook of Stroke Prevention in Clinical Practice Karen L. Furie, Peter J. Kelly, 2004-04-28 Despite major advances in the understanding of stroke mechanisms that have occurred over the past quarter century stroke continues to rank among the leading causes of death and disability worldwide Although currently it may be difficult to believe early doubts were expressed as to whether interventions in risk factors for either coronary disease or stroke would actually lead to a reduction in the incidence of these disorders However large clinical trials in hypertension carotid disease atrial fibrillation and antithrombotic and antiplatelet therapies have effectively demonstrated the efficacy of these targeted interventions in reducing stroke incidence More recently after earlier uncertainty regarding the role of elevated lipids as a risk factor for stroke clinical trials of the statins have also demonstrated a significant reduction in the incidence of ischemic stroke However as emphasized in Handbook of Stroke Prevention in Clinical Practice despite these gains and the initial decline in stroke incidence that did occur in the 1960s and 1970s the incidence of stroke disappointingly has failed to show a further significant decline since that time The editors of Handbook of Stroke Prevention in Clinical Practice raise the very important question of whether recognized strategies for stroke prevention have been widely or effectively implemented They correctly emphasize the critical importance of identifying the mechanism of stroke in each patient so as to properly direct prevention and treatment As Dr
