Process for System Architecture and Requirements Engineering Derek Hatley, Peter Hruschka, Imtiaz Pirbhai, 2013-08-02. This is the digital version of the printed book. Copyright 2000 Derek Hatley and Imtiaz Pirbhai. Authors of *Strategies for Real Time System Specification* join with influential consultant Peter Hruschka to present a much anticipated update to their widely implemented Hatley Pirbhai methods. *Process for System Architecture and Requirements Engineering* introduces a new approach that is particularly useful for multidisciplinary system development. It applies equally well to all technologies and thereby provides a common language for developers in widely differing disciplines. The Hatley Pirbhai Hruschka approach (HHP) has another important feature: the coexistence of the requirements and architecture methods and of the corresponding models they produce. These two models are kept separate but the approach fully records their ongoing and changing interrelationships. This feature is missing from virtually all other system and software development methods and from CASE tools that only automate the requirements model. System managers, system architects, system engineers, and managers and engineers in all of the diverse engineering technologies will benefit from this comprehensive pragmatic text. In addition to its models of requirements and architecture and of the development process itself, the book uses in depth case studies of a hospital monitoring system and of a multidisciplinary groundwater analysis system to illustrate the principles.

Compatibility Between the HHP Methods and the UML The Hatley Pirbhai architecture and requirements methods described in *Strategies for Real Time System Specification* have been widely used for almost two decades in system and software development. Now known as the Hatley Hruschka Pirbhai (HHP) methods, they have always been compatible with object oriented software techniques such as the UML by defining architectural elements as classes, objects, messages, inheritance, relationships, and so on. In *Process for System Architecture and Requirements Engineering*, that compatibility is made more specific through the addition of message diagrams, inheritance diagrams, and new notations that go with them. In addition, state charts, while never excluded, are now specifically included as a representation of sequential machines. These additions make definition of the system software boundary even more straightforward while retaining the clear separation of requirements and design at the system levels that is a hallmark of the HHP methods, not shared by most OO techniques. Once the transition to software is made, the developer is free to continue using the HHP methods or to use the UML or any other software specific technique.

PCI System Architecture Tom Shanley, Don Anderson, MindShare, Inc, 1995. *PCI System Architecture* describes revision 2.1 of the Peripheral Component Interconnect (PCI) bus specification, providing a clear, concise explanation of PCI's relationship to the rest of the system. This book has been updated and revised to include in depth treatment of PCI to PCI bridges, the PCI BIOS, the 66MHz PCI bus, and more. PCI experts Tom Shanley and Don Anderson provide a comprehensive treatment of the bus. This book also examines the VLSI Technology VL82C59x chipset to illustrate an example PCI bus implementation. **BOOK**
