**The Competition of Fibres** Wolfram Schier, Susan Pollock, 2020-04-30 The central issues

discussed in this new collected work in the highly successful ancient textiles series are the relationships between fiber resources and availability on the one hand and the ways those resources were exploited to produce textiles on the other. Technological and economic practices for example the strategies by which raw materials were acquired and prepared in the production of textiles play a major role in the papers collected here. Contributions investigate the beginnings of wool use in western Asia and southeastern Europe. The importance of wool in considerations of early textiles is due to at least two factors. First both wild as well as some domesticated sheep are characterized by a hairy rather than a woolly coat. This raises the question of when and where woolly sheep emerged a question that has not up to now been resolvable by genetic or other biological analyses. Second wool as a fiber has played a major role both economically and socially in both western Asian and European societies from as early as the 3rd millennium BCE in Mesopotamia and it continues to do so in different ways up to the modern day. Despite the importance of wool as a fiber resource contributors demonstrate clearly that its development and use can only be properly addressed in the context of a consideration of other fibers both plant and animal. Only within a framework that takes into account historically and regionally variable strategies of procurement processing and the products of different types of fibers is it possible to gain real insights into the changing roles played by fibers and textiles in the lives of people in different places and times in the past. With relatively rare albeit sometimes spectacular exceptions archaeological contexts offer only poor conditions of preservation for textiles. As a result archaeologists are dependent on indirect or proxy indicators such as textile tools e.g. loom weights spindle whorls and the analysis of faunal remains to explore a range of such proxies and methods by which they may be analyzed and evaluated in order to contribute to an understanding of fiber and textile production and use in the past.

*Beyond Thalassocracies* Evi Gorogianni, Peter Pavuk, Luca Girella, 2016-08-31

*Beyond Thalassocracies* aims to evaluate and rethink the manner in which archaeologists approach understand and analyze the various processes associated with culture change connected to interregional contact using as a test case the world of the Aegean during the Late Bronze Age c. 1600-1100 BC. The 14 chapters compare and contrast various aspects of the phenomena of Minoanisation and Mycenaeanisation both of which share the basic underlying defining feature of material culture change in communities around the Aegean. This change was driven by trends manifesting themselves in the dominant palatial communities of each period of the Bronze Age. Over the past decade our understanding of how these processes developed and functioned has changed considerably. Whereas current discussions on Minoanisation have already been informed by more recent theoretical trends especially in material culture studies and post colonial theory the process of Mycenaeanisation is still very much conceptualized along traditional lines of explanation. Since these phenomena occurred in chronological sequence it makes sense that any reappraisal of their nature and significance should target those regions of the Aegean basin that were affected by both processes highlighting their similarities and differences. Thus in the present volume we focus on the southern and eastern Aegean in particular the Cyclades Dodecanese and the north eastern Aegean.
