## What is epilepsy?

Epilepsy is a long-term condition characterized by recurrent, unprovoked seizures. It is caused by abnormal electrical activity in the brain, which can be triggered by a variety of factors, including genetic factors, brain injury, infection, and stroke. The condition is diagnosed when a person has had at least two unprovoked seizures, or one seizure followed by a high risk of having a further seizure within 10 years.

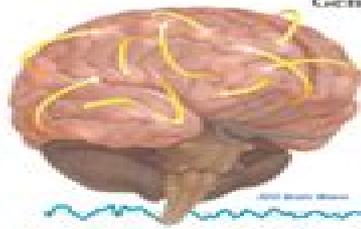

## What is an epileptic seizure?

An epileptic seizure is a sudden, unprovoked burst of abnormal electrical activity in the brain. This activity can cause a variety of symptoms, including loss of consciousness, muscle spasms, and changes in behavior. Seizures are caused by a variety of factors, including genetic factors, brain injury, infection, and stroke.

Partial seizures are characterized by abnormal electrical activity in a specific area of the brain. This activity can cause a variety of symptoms, including changes in sensation, movement, or awareness. Generalized seizures are characterized by abnormal electrical activity in both sides of the brain. This activity can cause a variety of symptoms, including loss of consciousness, muscle spasms, and changes in behavior.

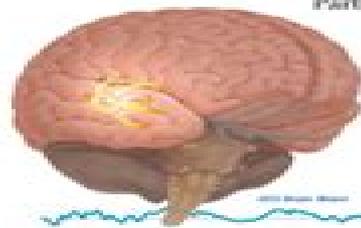

## Generalized seizures

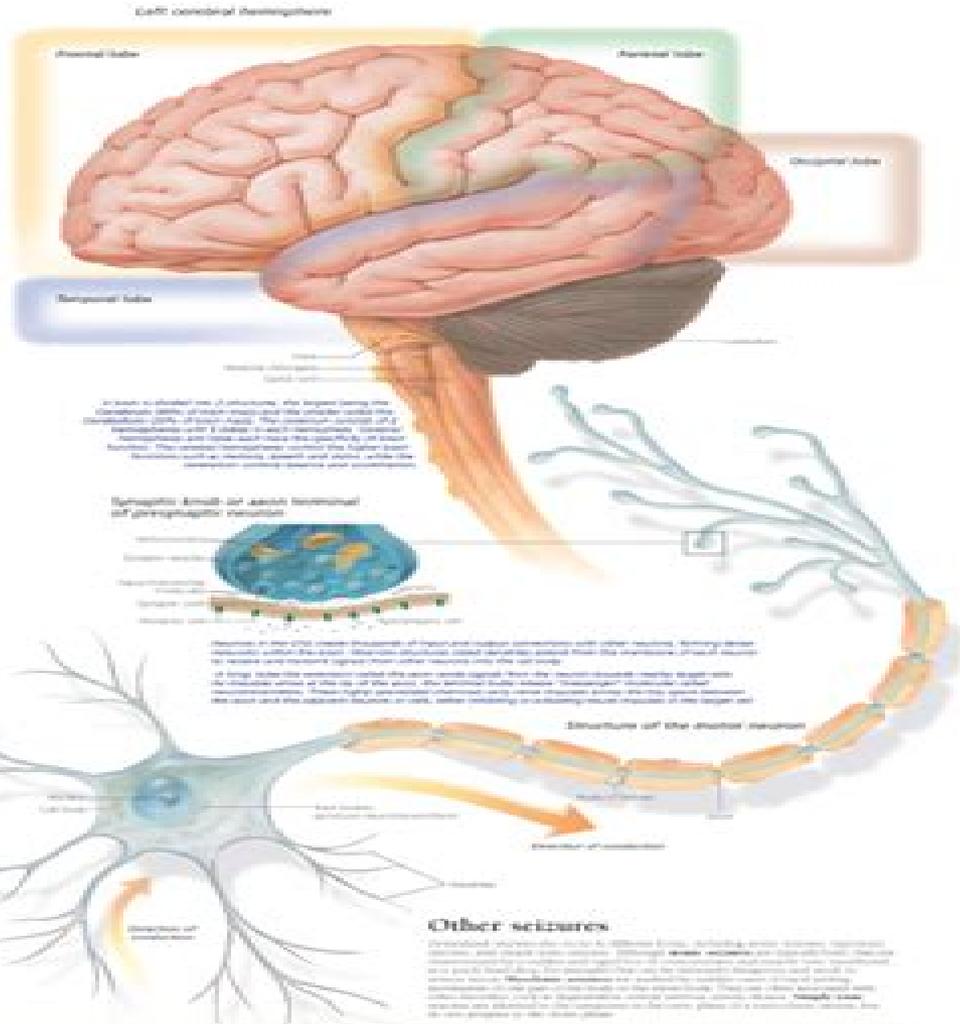

Generalized seizures are characterized by abnormal electrical activity in both sides of the brain. This activity can cause a variety of symptoms, including loss of consciousness, muscle spasms, and changes in behavior. There are several types of generalized seizures, including tonic-clonic seizures, absence seizures, and myoclonic seizures.

## Partial (focal) seizures

Partial (focal) seizures are characterized by abnormal electrical activity in a specific area of the brain. This activity can cause a variety of symptoms, including changes in sensation, movement, or awareness. There are several types of partial (focal) seizures, including simple partial seizures, complex partial seizures, and partial seizures with impaired awareness.

**Diagnosing and treating epilepsy**  
The diagnosis of epilepsy is based on a combination of factors, including a detailed history of the seizures, a physical examination, and an EEG. Treatment for epilepsy is aimed at preventing further seizures and minimizing the side effects of medication. There are several types of anti-epileptic drugs (AEDs) available, and the choice of drug depends on the type of seizure and the individual's medical history.

**Managing your epilepsy**  
People with epilepsy should work closely with their healthcare provider to manage their condition. This includes taking medication as prescribed, avoiding triggers, and having a seizure action plan. Regular follow-up appointments are important to monitor the effectiveness of treatment and adjust it as needed.
