Turbulence Management And Relaminarisation:

Turbulence Management and Relaminarisation H.W. Liepmann, R. Narashima, 2012-12-06 The last two decades have witnessed an intensifying effort in learning how to manage flow turbulence it has in fact now become one of the most challenging and prized technological goals in fluid dynamics The goal itself is of course not new More than a hundred years ago Reynolds already listed factors conducive to laminar and to turbulent flow including among them curvature and acceleration Further more it is in retrospect clear that there were several early instances of successful turbulence management Examples are the reduction in drag achieved with a ring trip placed on the front of a sphere or the insertion of a splitter plate behind a circular cylinder by the early 1950s there were numerous exercises at boundary layer control Although many of these studies were interesting and suggestive they led to no spectacularly successful practical application and the effort petered out in the late 1950s The revival of interest in these problems in recent years can be attributed to the emergence of several new factors First of all fresh scientific insight into the structure of turbulence in particular the accumulated evidence for the presence of significant order in turbulent flow has been seen to point to new methods of managing turbulence A second major reason has been the growing realisation that the rate at which the world is consuming its reserves of fossil fuels is no longer negligible the economic value of greater energy efficiency and lower drag has gone up significantly

Turbulence Management and Relaminarisation Hans Wolfgang Liepmann, 1988 **IUTAM Symposium on Mechanics of Passive and Active Flow Control** G.E.A. Meier, P.R. Viswanath, 1999-08-31 The call for papers for the rUTAM Symposium on Mechanics of Passive and Active Flow Control brought an overwhelming response of applications for contributions Finally 12 invited lectures 48 papers and 23 posters were selected by the Scientific Committee to be presented in the conference 58 papers are published in this volume Due to the limited number of pages available poster presentations could not be considered for publication The editors would like to thank all the members of the Scientific Committee for their very valuable assistance The papers presented at the rUTAM Symposium were classified under three groups devoted to Passive Control Methods Active Control Methods and Control Concepts This was done to contrast at first between the passive techniques where the control power is mainly supplied by the flow itself and the active techniques where the power is provided by external sources the third group was devoted to control concepts for presenting methods of control theory and new techniques of flow control

Wind Tunnels and Experimental Fluid Dynamics Research Jorge Colman Lerner, Ulfilas Boldes, 2011-07-27 The book *Wind Tunnels and Experimental Fluid Dynamics Research* is comprised of 33 chapters divided in five sections The first 12 chapters discuss wind tunnel facilities and experiments in incompressible flow while the next seven chapters deal with building dynamics flow control and fluid mechanics Third section of the book is dedicated to chapters discussing aerodynamic field measurements and real full scale analysis chapters 20 22 Chapters in the last two sections deal with turbulent structure analysis chapters 23 25 and wind tunnels in compressible flow chapters 26 33

Contributions from a large number of international experts make this publication a highly valuable resource in wind tunnels and fluid dynamics field of research Experimental Heat Transfer, Fluid Mechanics and Thermodynamics 1993 M.D. Kelleher, R.K. Shah, K.R. Sreenivasan, Y. Joshi, 2012-12-02 The papers contained in this volume reflect the ingenuity and originality of experimental work in the areas of fluid mechanics heat transfer and thermodynamics The contributors are drawn from 27 countries which indicates how well the worldwide scientific community is networked The papers cover a broad spectrum from the experimental investigation of complex fundamental physical phenomena to the study of practical devices and applications A uniform outline and method of presentation has been used for each paper *Flow and Noise Control: Review and Assessment of Future Directions* Russell H. Thomas, 2002 **Recent Developments in Turbulence Management** Kwang-So Choi, 1991 Including papers on riblets this book covers their practical applications to aircraft and to a model ship near wall coherent structure of boundary layer and effects of flow three dimensionality This volume also includes LEBUs Large Eddy Break Up devices surface roughness compliant surfaces and polymer additives and more *Preprints for the ... Symposium on Turbulence*, 1990 **Applied Mechanics Reviews**, 1996 *International Aerospace Abstracts*, 1996 **Turbulent Shear Flows 6** Jean-Claude Andre, Jean Cousteix, Franz Durst, Brian E. Launder, Frank W. Schmidt, James H. Whitelaw, 2013-03-09 Since the inaugural symposium at the Pennsylvania State University in 1977 the venues for the series of biennial symposia on turbulent shear flows have alternated between the USA and Europe For the Sixth Symposium the first to be held in France the city of Toulouse proved a natural choice being a centre for the aerospace industry meteorological research and higher education The meeting was hosted by the Paul Sabatier University on the southern perimeter of the city and there nearly 300 workers in the field of turbulence converged to pronounce upon debate and absorb the current issues in turbulent shear flows and to enjoy the unfailing September sunshine The meeting had attracted more than 200 offers of papers from which just over 100 full papers and about 20 shorter communications in open forums could be accommodated The present volume contains 28 of the original symposium presentations selected by the editors Each contribution has been revised by its authors sometimes quite extensively in the light of the oral presentation It is our hope that the selection provides a substantial statement of permanent interest on current research in the five areas covered by this book i.e. fundamentals and closures scalar transport and geophysical flows aerodynamic flows complex flows and numerical simulations **Aeronautical Engineering**, 1991 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA **IUTAM Symposium on Flow Control and MEMS** Jonathan F. Morrison, D. M. Birch, P. Lavoie, 2010-09-09 The Symposium brought together many of the world's experts in fluid mechanics microfabrication and control theory to discover the synergy that can lead to real advances and perhaps find ways in which collaborative projects may proceed The high

profile meeting was attended by keynote speakers who are leaders in their fields A key driver was the improvement in flow efficiency to reduce drag and thereby emissions arising from transport About 65 papers were presented *The Interaction of Near-wall Turbulence with Compliant Tensegrity Fabrics* Haoxiang Luo,2004 *Further Developments in Turbulence Management* K. Krishna Prasad,1993 The thrust of modern research on turbulence in fluids is concerned with coherent structures and modelling Riblets have been shown to reduce drag and the papers presented in this volume tackle the main question of the mechanism responsible for this behaviour in turbulent flow The contributions in this volume were presented at the Sixth Drag Reduction Meeting held at Eindhoven during November 1991 This volume will be a useful reference work for engineers physicists and applied mathematicians interested in the topic of fluid turbulence **Self-sustaining Mechanisms of Wall Turbulence** Ronald Lee Panton,1997 Why is wall turbulence self sustaining In this book well regarded researchers not only discuss what they know and believe but also speculate on ideas that still require numerical or experimental testing and verification An initial brief history of boundary layer structure research is followed by chapters on experimental information and specific topics within the subject There are then sections on computational aspects NASA SP. ,1990 **Special Course on Skin Friction Drag Reduction** ,1992 **Computational Methods in Aeronautical Fluid Dynamics** Institute of Mathematics and Its Applications,1990 This extensive volume provides a comprehensive overview of the state of the art in computational fluid dynamics as conducted by the aerospace research community Coverage includes integral methods boundary layer and viscous flows turbulence modelling vortex dynamics Navier Stokes for external aerodynamics mesh generation and adaptive refinement and hypersonic flow The book emphasizes real problems in aerodynamics and the numerical methods used in their solution a particular strength of aerospace researchers who have long used numerical modelling and testing as a vital engineering tool The work will be a welcome addition to the libraries of computational fluid dynamics researchers who will find it a valuable source of information on current research results as well as an indication of future challenges Tenth Australasian Fluid Mechanics Conference ,1989
