Turing Test:

The Turing Test James Moor,2003-04-30 This book gives the most comprehensive in depth and contemporary assessment of this classic topic in artificial intelligence It is the first to elaborate in such detail the numerous conflicting points of view on many aspects of this multifaceted controversial subject It offers new insights into Turing s own interpretation and is essential reading for research on the Turing test and for teaching undergraduate and graduate students in philosophy computer science and cognitive science

The Turing Test Stuart M. Shieber,2004-06-18 Historical and contemporary papers on the philosophical issues raised by the Turing Test as a criterion for intelligence The Turing Test is part of the vocabulary of popular culture it has appeared in works ranging from the Broadway play Breaking the Code to the comic strip Robotman The writings collected by Stuart Shieber for this book examine the profound philosophical issues surrounding the Turing Test as a criterion for intelligence Alan Turing s idea originally expressed in a 1950 paper titled Computing Machinery and Intelligence and published in the journal Mind proposed an indistinguishability test that compared artifact and person Following Descartes s dictum that it is the ability to speak that distinguishes human from beast Turing proposed to test whether machine and person were indistinguishable in regard to verbal ability He was not as is often assumed answering the question Can machines think but proposing a more concrete way to ask it Turing s proposed thought experiment encapsulates the issues that the writings in The Turing Test define and discuss The first section of the book contains writings by philosophical precursors including Descartes who first proposed the idea of indistinguishability tests The second section contains all of Turing s writings on the Turing Test including not only the Mind paper but also less familiar ephemeral material The final section opens with responses to Turing s paper published in Mind soon after it first appeared The bulk of this section however consists of papers from a broad spectrum of scholars in the field that directly address the issue of the Turing Test as a test for intelligence Contributors John R Searle Ned Block Daniel C Dennett and Noam Chomsky in a previously unpublished paper Each chapter is introduced by background material that can also be read as a self contained essay on the Turing Test

Machina Sapiens Nello Cristianini,2025-08-19 Can machines think This troubling question posed by Alan Turing in 1950 has perhaps been answered today we can converse with

a computer without being able to distinguish it from a person Machines can pass university exams and program other computers ChatGPT Bard and other language models have proved proficient at performing tasks far beyond their creators initial expectations and we still do not know why Trained simply to predict missing words in a text such models have gained an understanding of the world and language that makes them capable of reasoning planning solving problems as well as conversing almost flawlessly Is this the secret of knowledge and is it now in the hands of our creations Perhaps we are no longer alone And as we try to figure out how to share these powers with the aliens who now work at our side we can wonder what else they may learn tomorrow Are we approaching a critical threshold beyond which machines will attain superhuman performance Following on from The Shortcut Nello Cristianini has authored another brilliant book written like a gripping thriller explaining the ideas behind a technology destined to change the world If our worst terror has always stemmed from fear of the unknown the cure since time immemorial is knowledge

The Turing Test Argument Bernardo Gonçalves,2023-12-12 This book departs from existing accounts of Alan Turing s imitation game and test by placing Turing s proposal in its historical social and cultural context It reconstructs a controversy in England 1946 1952 over the intellectual capabilities of digital computers which led Turing to propose his test It argues that the Turing test is best understood not as a practical experiment but as a thought experiment in the modern scientific tradition of Galileo Galilei The logic of the Turing test argument is reconstructed from the rhetoric of Turing s irony and wit Turing believed that learning machines should be understood as a new kind of species and their thinking as different from human thinking and yet capable of imitating it He thought that the possibilities of the machines he envisioned were not utopian dreams And yet he hoped that they would rival and surpass chauvinists and intellectuals who sacrifice independent thinking to maintain their power These would be transformed into ordinary people as work once considered intellectual would be transformed into non intellectual mechanical work The Turing Test Argument will appeal to scholars and students in the sciences and humanities and all those interested in Turing s vision of the future of intelligent machines in society and nature

Deceitful Media Simone Natale,2021 Artificial intelligence AI is often discussed as something extraordinary a dream or a nightmare that awakens metaphysical questions on human life Yet far from a distant technology of the future the true power of AI lies in its subtle revolution of ordinary life From voice assistants like Siri to natural language processors AI technologies use cultural biases and modern psychology to fit specific characteristics of how users perceive and navigate the external world thereby projecting the illusion of intelligence Integrating media studies science and technology studies and social psychology Deceitful Media examines the rise of artificial intelligence throughout history and exposes the very human fallacies behind this technology Focusing specifically on communicative AIs Natale argues that what we call AI is not a form of intelligence but rather a reflection of the human user Using the term banal deception he reveals that deception forms the basis of all human computer interactions rooted in AI technologies as technologies like voice assistants utilize the dynamics of projection and stereotyping as a means for aligning with our existing habits and social conventions By exploiting the human instinct to connect AI reveals our collective vulnerabilities to deception showing that what machines are primarily changing is not other technology but ourselves as humans Deceitful Media illustrates how AI has continued a tradition of technologies that mobilize our liability to deception and shows that only by better understanding our vulnerabilities to
